Comprensión auditiva - Módulo 1 - Elegir una respuesta

01 Elegir una respuesta 1

What time works best for you to meet for lunch tomorrow?

02 Elegir una respuesta 2

Would you like to join us for a Hank this Saturday?

03 Elegir una respuesta 3

Excuse me, where can I print my assignment?

04 Elegir una respuesta 4

Could you help me catch up on the class I missed today?

05 Elegir una respuesta 5

How did your job interview go yesterday?

06 Elegir una respuesta 6

Do you happen to know who left this notebook?

07 Elegir una respuesta 7

Could we postpone the rehearsal until Wednesday?

08 Elegir una respuesta 8

I was surprised the documentary ended so abruptly.

Comprensión auditiva - Módulo 1 - Audios extensos

09 Comprensión auditiva - Conversación

Woman: Did you hear that the campus is starting a bike-sharing program next month?

Man: Really? That's great. I've been thinking about how to get across campus faster. Walking from the dorms to the science building takes almost twenty minutes.

Woman: Exactly. Apparently there'll be stations at all the main buildings. You unlock a bike with an app, ride it where you need to go, and leave it at any station.

Man: Nice. Is it free for students?

Woman: The first thirty minutes of each ride are free, which is more than enough to get anywhere on campus. After that it's a small fee, but honestly, who rides more than thirty minutes just to get to class?

Man: True. My only concern is whether there'll be enough bikes during busy times. You know, right before nine a.m. classes, everyone's rushing.

Woman: That's a fair point. They said they'll track usage and add more bikes to the busiest stations. I guess we'll see how it goes.

Man: Well, I'm definitely signing up. Anything to avoid that twenty-minute walk in the rain.

10 Comprensión auditiva - Anuncio

Good afternoon. This is an announcement from the university library. Beginning next week, we are launching a new service for graduate students: extended loan periods for research materials. Instead of the standard three-week loan, graduate students may now borrow most books for up to twelve weeks, with the option to renew online. Please note that high-demand items on course reserve are not included in this program and remain limited to short loan periods so that all students can access them.

To take advantage of the extended loans, simply check out your materials as usual - the longer period will be applied automatically to eligible items based on your student status. If you have questions, our staff at the research help desk on the second floor will be glad to assist you.

11 Comprensión auditiva - Charla académica

Professor: Today I want to explore a question that sounds simple but turns out to be surprisingly deep: why is the sky blue? Most of you have probably heard that it has something to do with the atmosphere scattering sunlight, and that's correct - but let's unpack what that actually means. Sunlight looks white, but it's actually a mixture of all the colors of the rainbow, each with a different wavelength. Blue and violet light have short wavelengths; red and orange light have long ones. When sunlight enters the atmosphere, it collides with molecules of gas - mostly nitrogen and oxygen. These molecules scatter the light in all directions, but here's the key point: they scatter shorter wavelengths much more strongly than longer ones. This is called Rayleigh scattering. Because blue light is scattered far more than red, the blue light bounces around the sky and reaches your eyes from every direction. That's why the whole sky appears blue, not just the area around the sun. Now, a natural follow-up question: if violet light has an even shorter wavelength than blue, why isn't the sky violet? Two reasons. First, the sun emits less violet light than blue to begin with. Second, our eyes are simply more sensitive to blue than to violet. So the sky we perceive is blue. And this same principle explains sunsets. When the sun is low on the horizon, its light travels through much more atmosphere to reach us. Along that longer path, most of the blue light has already been scattered away, leaving the reds and oranges to dominate.

So the very same physics that makes the midday sky blue makes the evening sky red.

Comprensión auditiva - Módulo 2 - Elegir una respuesta

12 Elegir una respuesta 1

Where should visitors park during the construction?

13 Elegir una respuesta 2

I did not realize the application required two references.

14 Elegir una respuesta 3

Would you check whether the window is locked?

15 Elegir una respuesta 4

Why are you taking the later bus?

16 Elegir una respuesta 5

The bookstore says my order is finally ready.

17 Elegir una respuesta 6

How long should we leave between the two trains?

18 Elegir una respuesta 7

I cannot hear the speaker from the back row.

19 Elegir una respuesta 8

Did you remember to reserve the conference room?

Comprensión auditiva - Módulo 2 - Audios extensos

20 Uso del programa de bicicletas del campus

Student: I joined the campus bicycle program, but the application will not let me unlock a bicycle. Staff

Member: Your account is active. The first time you ride, you must scan your identification card at a station before using the phone application.

Student: I see. Is the first half hour still free? Staff

Member: Yes. After thirty minutes, the regular fee begins. During busy periods, return the bicycle to any station with an open space rather than leaving it beside a full station.

21 Inscripción en un intercambio de idiomas

Announcer: Registration for the spring language exchange opens tomorrow at nine a.m. Participants meet with a partner for one hour each week and divide the time between the two languages they are practicing. Complete the online interest form by Friday. Matches will be announced next Wednesday. The first meeting is an orientation for all participants, so partners should not arrange a separate meeting before then.

22 Observación del fitoplancton desde el espacio

Professor: Phytoplankton are microscopic organisms that use photosynthesis and form the base of many aquatic food webs. Individual cells are far too small for a satellite camera to resolve. Yet large populations affect ocean color because chlorophyll and other pigments absorb and reflect particular wavelengths of light. Instruments in orbit measure that light, and scientists use the measurements to estimate surface chlorophyll and phytoplankton abundance. The satellite view has a major advantage: it repeatedly covers broad ocean regions that ships cannot sample everywhere at once. Researchers can follow the location and timing of large blooms and compare seasonal patterns across years. Ocean color is an indirect measurement, however. Sediment, dissolved material, clouds, and the atmosphere can also affect the detected signal. A satellite generally observes the sunlit surface rather than the entire water column. For those reasons, scientists still collect water from ships and fixed stations. Laboratory analysis can identify organisms more precisely and helps test how well a satellite estimate matches local conditions. New hyperspectral instruments measure many more wavelength bands than earlier sensors and may distinguish some communities more effectively. They do not eliminate field sampling. The strongest picture comes from combining the broad, repeated coverage of satellites with detailed measurements taken in the water.

Expresión oral - Escuchar y repetir

23 Repetición 1

The class starts at ten.

24 Repetición 2

She locked the door and left for work.

25 Repetición 3

The team presented their findings at the conference last week.

26 Repetición 4

The bridge that connects the two towns was built over a century ago.

27 Repetición 5

Once the results have been reviewed, the committee will announce its decision to the applicants.

28 Repetición 6

New bicycle stations make it easier for students to travel between the main campus buildings.

29 Repetición 7

Since parking will be limited during the festival, visitors are encouraged to take public transportation or use the free shuttle.

Expresión oral - Entrevista

30 Entrevista 1

Let's begin. Describe a place you would like to visit in the future. Where is it, and why do you want to go there?

31 Entrevista 2

Some people prefer to read the news online, while others prefer newspapers or television. Which do you prefer, and why? Give reasons and an example.

32 Entrevista 3

Your town can spend money to either plant more trees or add more street lighting. Which would you recommend, and why? Explain how it would benefit residents.

33 Entrevista 4

Finally, make a prediction: how might the way students learn languages change in the next twenty years? Explain your reasoning.
