Comprensión auditiva - Módulo 1 - Elegir una respuesta

01 Elegir una respuesta 1

Excuse me, where can I find the dictionaries?

02 Elegir una respuesta 2

Could you give me a ride to the airport tomorrow morning?

03 Elegir una respuesta 3

Do you know when the application deadline is?

04 Elegir una respuesta 4

Could you bring an extra calculator to the exam tomorrow? I lost mine.

05 Elegir una respuesta 5

How did your team do at the science competition?

06 Elegir una respuesta 6

Have you seen the updated conference program?

07 Elegir una respuesta 7

Why did Leo bring an extra extension cord?

08 Elegir una respuesta 8

Could you let me know when the director arrives?

Comprensión auditiva - Módulo 1 - Audios extensos

09 Comprensión auditiva - Conversación

Woman: You look stressed. Everything okay?

Man: Not really. I have three assignments due next week and a group project, and I feel like I'm drowning. I don't even know where to start.

Woman: I've been there. Have you tried making a list and prioritizing? When I feel overwhelmed, I write down everything I have to do and then rank it by deadline and importance.

Man: I usually just try to do everything at once, and then I end up doing nothing well.

Woman: That's exactly the trap. The thing that helped me most was breaking big tasks into smaller steps. Instead of "write essay," I put "make an outline," "find three sources," "write introduction." Each small step feels doable, and you get momentum.

Man: That does sound less scary than staring at a blank page.

Woman: Right. And for the group project, talk to your team as soon as possible and divide the work. Don't wait - that's where a lot of stress comes from, when everyone leaves it until the last minute.

Man: Good point. I think I've been avoiding messaging them because it felt like one more thing to do.

Woman: Do it today. Honestly, once the work is organized and shared out, half the stress disappears. It's the feeling of chaos that's the worst part, not the work itself.

10 Comprensión auditiva - Anuncio

Good afternoon, students. This is an announcement from the science department about the upcoming science fair. The fair will take place in two weeks, on Saturday the twenty-second, in the main hall from ten a.m. to four p.m. All students are invited to enter a project, either individually or in teams of up to three. If you wish to take part, you must submit a one-page project proposal to your science teacher by this Friday. This should describe your question, your method, and the materials you'll need.

The department has a small budget to help with materials, so please indicate if you need support. Prizes will be awarded in several categories, and the winning projects will represent our school at the regional competition next month. If you have questions, come to the information session on Wednesday at lunchtime in Room 12.

11 Comprensión auditiva - Charla académica

Professor: Today I want to discuss a concept that transformed our understanding of the ocean: the deep-sea hydrothermal vent. Until the late nineteen-seventies, scientists believed that all life ultimately depended on sunlight. Plants capture sunlight through photosynthesis, animals eat plants, and so on up the food chain. The deep ocean floor, far below where any light penetrates, was assumed to be almost lifeless - a cold, dark desert. Then, in nineteen seventy-seven, scientists exploring the sea floor near the Galápagos Islands made a stunning discovery. Around cracks in the ocean floor, where superheated, mineral-rich water gushed out from beneath the Earth's crust, they found thriving communities of life: giant tube worms, clams, crabs, and more, packed densely in the darkness. This was a profound puzzle. With no sunlight, how could such an abundance of life exist? The answer revolutionized biology. The base of this ecosystem is not plants but bacteria that perform what we call chemosynthesis. Instead of using sunlight, these bacteria draw energy from chemicals - particularly hydrogen sulfide - dissolved in the vent water. They convert this chemical energy into food, just as plants convert sunlight. Everything else in the vent community depends, directly or indirectly, on these chemosynthetic bacteria. Why does this matter beyond the ocean floor? For one, it dramatically expanded our sense of where life can survive.

If life can thrive on chemical energy in total darkness under crushing pressure, then perhaps life could exist in similarly extreme environments elsewhere - including on other worlds, such as beneath the icy surface of some of Jupiter's and Saturn's moons, where oceans may exist. The discovery of hydrothermal vents didn't just add a chapter to marine biology; it reshaped how scientists think about the very limits of life itself.

Comprensión auditiva - Módulo 2 - Elegir una respuesta

12 Elegir una respuesta 1

Who should receive the completed survey forms?

13 Elegir una respuesta 2

I did not expect the trail to be this muddy.

14 Elegir una respuesta 3

Would you mind turning the projector slightly?

15 Elegir una respuesta 4

Where can I find the minutes from last month’s meeting?

16 Elegir una respuesta 5

Why are you replacing the batteries already?

17 Elegir una respuesta 6

The registration page will not accept my address.

18 Elegir una respuesta 7

How long will the temporary exhibit remain open?

19 Elegir una respuesta 8

Did the mechanic identify the unusual noise?

Comprensión auditiva - Módulo 2 - Audios extensos

20 Cambio de plan de alimentación

Student: I selected the largest meal plan when I moved into residence, but I eat off campus on weekends and have many meals left. Staff

Member: You may switch to the medium plan during the adjustment period, which ends Wednesday.

Student: Will the unused meals transfer to the new plan? Staff

Member: The system will first calculate what you have already used. Any payment difference will appear as a credit on your student account within five business days. Submit the online change form before midnight Wednesday.

21 Ubicación de las tutorías de química

Announcer: This evening's chemistry tutoring has moved from Science Room 105 to Library Room 214 because the laboratory ventilation system is being tested. The session still begins at six thirty and requires no registration. Enter the library through its east door after six. Students may bring current problem sets, but tutors will not review completed take-home examinations.

22 Detección de exoplanetas por tránsito

Professor: The transit method detects exoplanets without resolving their images. A transit occurs when a planet passes between its star and the observer. The planet blocks a small fraction of starlight, creating a dip in a graph of brightness over time called a light curve. Repeated dips at regular intervals can reveal the planet's orbital period. The depth of a dip, interpreted with the star's size, helps estimate the planet's radius: a larger planet generally blocks a larger fraction of light. A transit can also support studies of an atmosphere because some wavelengths of starlight pass through gases around the planet differently. The method has selection effects. The orbit must be aligned so the planet crosses the star from our viewpoint. Many planets never transit as seen from Earth. Short-period planets produce more events during a limited campaign, and large planets create deeper, easier-to-detect dips. Other phenomena, including eclipsing stars or changes on a star's surface, can mimic a planetary signal. Astronomers therefore seek repeated events and use follow-up observations or other methods to validate candidates. Transit surveys monitor many stars consistently, but their discoveries are not an unbiased sample of planetary systems.

Expresión oral - Escuchar y repetir

23 Repetición 1

The game starts soon.

24 Repetición 2

They cleaned the kitchen before the guests arrived.

25 Repetición 3

The librarian helped the students find the books they needed.

26 Repetición 4

The scientists warned that the glacier was melting faster than expected.

27 Repetición 5

Even though the recipe looked complicated, it turned out to be surprisingly easy to follow.

28 Repetición 6

The language club pairs new learners with conversation partners who share similar interests and schedules.

29 Repetición 7

If the weather forecast changes overnight, the field trip coordinator will send an email before seven in the morning.

Expresión oral - Entrevista

30 Entrevista 1

To begin, describe a teacher who influenced you. Who were they, and how did they influence you?

31 Entrevista 2

Some people prefer to shop online, while others prefer to shop in physical stores. Which do you prefer, and why? Give reasons and an example.

32 Entrevista 3

Your city can build either a new public swimming pool or a new music hall. Which would you recommend, and why? Explain how it would benefit residents.

33 Entrevista 4

Finally, make a prediction: how might the way people watch films and television change over the next twenty years? Explain your reasoning.
