Comprensión auditiva - Módulo 1 - Elegir una respuesta

01 Elegir una respuesta 1

Excuse me, do you know where the music room is?

02 Elegir una respuesta 2

Could you help me get the room ready before everyone arrives?

03 Elegir una respuesta 3

Do you know where I can find the class schedule?

04 Elegir una respuesta 4

Would you mind giving me a ride to the station tomorrow?

05 Elegir una respuesta 5

Did you manage to do anything exciting over the summer break?

06 Elegir una respuesta 6

Where can I find the updated safety instructions?

07 Elegir una respuesta 7

Would tomorrow morning be convenient for the interview?

08 Elegir una respuesta 8

I cannot believe the café has sold out of soup again.

Comprensión auditiva - Módulo 1 - Audios extensos

09 Comprensión auditiva - Conversación

Woman: How's your presentation coming along? Isn't it due next week?

Man: Ugh, don't remind me. I've done all the research, but I'm terrible at speaking in front of people. I get so nervous I forget everything.

Woman: I used to be exactly the same. What helped me most was practicing out loud, over and over, until the words felt automatic. Not just reading it in my head - actually saying it, ideally in front of someone.

Man: That sounds a bit embarrassing.

Woman: It is at first! But that's kind of the point - if you can survive practicing in front of a friend, the real audience feels easier. I even recorded myself on my phone once and watched it back. Painful, but I noticed I was speaking way too fast and saying "um" constantly.

Man: Speaking too fast is definitely my problem. When I'm nervous I just rush to get it over with.

Woman: Right. One trick is to plan deliberate pauses - mark on your notes where you'll stop, breathe, and let a point sink in. It feels slow to you but sounds confident to the audience.

Man: That's really helpful. Would you be willing to watch me run through it once before next week?

Woman: Of course. Let's find a free classroom on Thursday. Honestly, one good practice run in front of a real person will do more than a dozen silent read-throughs.

10 Comprensión auditiva - Anuncio

Good afternoon, everyone. This is an announcement about changes to the campus bus service starting next month. In response to student feedback, we are adding a new route that connects the main campus to the science campus, which many of you have said is difficult to reach. The new route, number seven, will run every twenty minutes between eight a.m. and eight p.m. on weekdays. It stops at the main library, the student center, and the science campus entrance.

Like all campus buses, it is free for students with a valid ID. In addition, we are extending the evening service on the existing routes until eleven p.m., so those of you studying late will have a

way to get home safely. Updated route maps and timetables will be posted at every bus stop and on the transport page of the university website by the end of this week. Thank you for your feedback - it genuinely shapes these decisions.

11 Comprensión auditiva - Charla académica

Professor: Today I want to explore a question that sits at the crossroads of biology and psychology: why do humans, and many animals, play? Play seems, at first glance, like a waste of time and energy. A young animal running, wrestling, or chasing could instead be resting or searching for food. Play can even be dangerous - a playing animal is distracted and more vulnerable to predators. So from an evolutionary standpoint, if play were truly useless, we'd expect it to have been eliminated. The fact that it's so widespread suggests it must be doing something important. The leading explanation is that play is a form of practice. When young animals play-fight, they're rehearsing the movements and skills they'll need as adults - hunting, escaping, competing, or cooperating. A kitten pouncing on a ball of yarn is practicing the same motions it would use to catch prey. In this view, play is a safe way to build physical skills and coordination before the stakes become real. But play seems to do more than build physical skills. In social animals, play also appears to teach crucial social lessons. Through play, young animals learn to read each other's signals, to take turns, and to manage conflict. Importantly, they learn the limits - how hard they can bite in a play-fight before a companion gets genuinely upset. Researchers have found that animals which are deprived of play often grow into adults that struggle socially, overreacting to normal interactions. And here's a point I find especially interesting: play may also foster flexibility and creativity.

By trying out unusual actions and combinations in a low-stakes setting, a playful animal - or child - may develop the ability to improvise and solve novel problems. So while play looks frivolous, it may be one of nature's most sophisticated methods of learning. The next time you see children or animals at play, remember: they are almost certainly doing serious developmental work, disguised as fun.

Comprensión auditiva - Módulo 2 - Elegir una respuesta

12 Elegir una respuesta 1

Who is responsible for checking the citations?

13 Elegir una respuesta 2

The reservation system shows two different room numbers.

14 Elegir una respuesta 3

Could I exchange this ticket for the evening performance?

15 Elegir una respuesta 4

Why are you carrying all those reference books?

16 Elegir una respuesta 5

How long does the computer update usually take?

17 Elegir una respuesta 6

I thought the equipment demonstration was optional.

18 Elegir una respuesta 7

Did Ravi mention why he missed the appointment?

19 Elegir una respuesta 8

Would you mind checking the oven before we leave?

Comprensión auditiva - Módulo 2 - Audios extensos

20 Corrección de un registro de nómina

Student: My campus job payment is short by four hours. The online record shows that I left early last Thursday, but I worked the full shift.

Supervisor: I see the problem. The time clock stopped recording after the network interruption.

Student: Can the missing hours be added to this week's payment?

Supervisor: Payroll for this week has already closed. I will submit a correction today, and the amount will appear as a separate adjustment next Friday. Keep this confirmation number in case the change does not appear.

21 Sala adicional para una conferencia pública

Announcer: All seats in the auditorium for tonight's public lecture have been assigned. Additional guests may watch a live video in Room 204, where doors open at six forty-five. No separate ticket is needed for the overflow room. Questions submitted from either location through the event application will be considered during the final discussion. A recording will be posted next week, but the speaker's slides will not be distributed.

22 Los anillos de los árboles como indicadores climáticos

Professor: In regions with a distinct growing season, many trees add one growth ring each year. Ring width, density, and chemistry can respond to environmental conditions. Scientists use these measurements as proxy data-indirect evidence extending climate information before modern instruments. A wide ring does not universally mean a warm or wet year. Growth may be limited mainly by moisture in one dry location, by temperature near a high-elevation tree line, or by nonclimatic factors such as insects, competition, fire, or age. Researchers first compare ring measurements with local instrumental weather records during their period of overlap. A stable statistical relationship can then support a reconstruction of earlier conditions. Dating is equally important. Crossdating matches distinctive sequences among living trees, dead wood, and wooden objects. The shared pattern assigns calendar years and can reveal a missing ring. Scientists sample many trees rather than treating one trunk as a regional record. They also compare reconstructions with other proxies and historical evidence. Tree rings can provide annual records spanning centuries or longer, but their climate signal must be calibrated for a place, species, and limiting condition. A proxy is evidence to interpret, not a thermometer hidden inside wood.

Expresión oral - Escuchar y repetir

23 Repetición 1

The bakery smells wonderful.

24 Repetición 2

He packed his bag and left for the airport.

25 Repetición 3

The teacher praised the students for their hard work.

26 Repetición 4

The study showed that people who walk daily tend to sleep better at night.

27 Repetición 5

After the committee had reviewed all the applications, it invited ten candidates to attend an interview.

28 Repetición 6

The new bus route connects the science campus with the library and the main residence halls.

29 Repetición 7

Students presenting at the conference should test their slides in advance and arrive at the assigned room at least ten minutes early.

Expresión oral - Entrevista

30 Entrevista 1

To begin, describe a place in nature that you enjoy. Where is it, and what do you like about it?

31 Entrevista 2

Some people prefer to do one task at a time, while others like to do several things at once. Which are you, and why? Give reasons and an example.

32 Entrevista 3

Your city can spend money on either building a new bicycle path or widening the roads for cars. Which would you recommend, and why? Explain how it would benefit residents.

33 Entrevista 4

Finally, make a prediction: how might people's homes change over the next twenty years? Explain your reasoning.
