Listening transcript

Part 1 - Everyday social dialogue: booking a household tap-water sample drop-off in Cardiff

Caspian Dacre	Good morning, Taff Vale Water Analytics. Caspian speaking. How can I help?
Anwen Pryce	Hello. I want to have the tap water in my flat checked. I collected a sample yesterday, but I think I used the wrong jar.
Caspian Dacre	For a booked test, the container we supply is a sterile bottle, not a household jar. You can collect it here without charge before sampling.
Anwen Pryce	That is helpful. Could we make the booking now? My address is Flat Six, Celyn Court. That is Celyn, C E L Y N, on Penarth Road.

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Caspian Dacre	I have Celyn Court. Which outlet are you concerned about: the bathroom basin or the kitchen tap?
Anwen Pryce	The bathroom sometimes tastes metallic, but it is rarely used. I will take the official sample from the kitchen tap because we use that cold-water outlet every day.
Caspian Dacre	Good. The booking form needs an approximate collection time. You mentioned seven in your email, but can you be more precise?
Anwen Pryce	I leave for work just before seven. I can collect it at six forty-five, then bring it straight to you. Please record 6:45, not seven.
Caspian Dacre	Keep the sealed bottle cool during the journey, but do not freeze it. A small insulated bag is fine; loose ice must not touch the cap.
Anwen Pryce	Understood: keep it cool. I can deliver it in the morning. Could the report go through the online results portal rather than by post?
Caspian Dacre	Yes. Select results portal on the form. We will email when the report is ready.
Anwen Pryce	I also need to choose a day. Sunday would be convenient, though reception may not be open.
Caspian Dacre	Correct. We are closed on Sunday, and holding the bottle until Monday would make the recorded conditions less useful. Wednesday morning is available.
Anwen Pryce	Wednesday works. Should I take the first water that comes from the tap? I have heard people call that a first-draw sample.
Caspian Dacre	Not for the package you are choosing. Run the cold tap for two minutes first. The test is intended to describe the supplied water after flushing, not water that stood overnight.
Anwen Pryce	All right. I will not collect the first draw. Are there several testing packages?
Caspian Dacre	Three. The basic screen checks mineral balance only. The metals panel adds lead, copper and several related elements. The full household package also includes microbiology.
Anwen Pryce	The flat has old internal pipes, so the metals panel sounds most relevant. I considered the full package, but nobody has been ill and I do not need that broader service.
Caspian Dacre	The standard metals panel is eighty-two pounds. Results take five working days. A faster two-day service exists, but it costs substantially more.
Anwen Pryce	Five working days is fine. Is payment due when I collect the bottle, or when I bring the sample back?
Caspian Dacre	When you bring the sample. We can take a card at reception, so there is no need to pay online in advance.
Anwen Pryce	Before I go, let me check: Celyn Court, kitchen tap, 6:45 on Wednesday, sterile bottle kept cool, and the standard metals panel with portal delivery.
Caspian Dacre	Label it after filling, keep the cap clean, and arrive by ten. If plans change, call us before you collect the sample. Reception labels every arrival by booking number, preserving the sample custody record.
Anwen Pryce	Perfect. I will collect the bottle and bring the sample on Wednesday morning. Thank you for explaining the difference between the packages.

Part 2 - Everyday social monologue: winter orientation at a fictional Canberra arboretum

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Keira Mallon	Welcome to the Wattle Ridge Arboretum winter walk. I am Keira Mallon, one of the visitor guides. Please look at the simplified map while I explain today's route.
Keira Mallon	North is at the top. You are at the main gate on the southern edge, beside the visitor centre. The blue line marks the step-free winter loop.
Keira Mallon	The path immediately east of the visitor centre goes beside the central lawn. Ignore the narrow track that cuts across the lawn; it is not surfaced for wheelchairs.
Keira Mallon	For the conifer walk, follow the winter loop north from the main gate and keep left at the first fork. Pass the lower western bend and continue to the upper bend immediately south of the triangular Young Eucalypts plot.
Keira Mallon	That triangle contains young eucalypts, not conifers. The mature evergreens begin just below it on the upper curve; the lower curve west of the lawn is an open bed.
Keira Mallon	Visitors who need a warm break should return to the fork and take the short eastern spur. The warming shelter is the square building immediately south of Lookout Road.
Keira Mallon	The building on the opposite side of Lookout Road is a tool store. It has a veranda, but it is not open to visitors and has no heating.
Keira Mallon	The accessible viewing deck is farther east. Pass the rectangular bed beside the central lawn, then take the map's only short blue dead-end spur towards North Creek. The broad platform at the spur's end is the deck.
Keira Mallon	That spur stops immediately south of the creek. Do not use the nearer point beside the lawn or the separate hill steps, which may be icy.
Keira Mallon	A storm damaged the timber bridge north of the creek. It appears on the map between the platform and the research plots, but barriers close both approaches today.
Keira Mallon	You can still reach the research plots by staying on the southern bank and following the loop west. Please do not move any of the small numbered markers.
Keira Mallon	The glasshouse is the oval building at the western end of Lookout Road, just north of the conifer curve. Its public entrance faces east, towards the road.
Keira Mallon	The long rectangle nearer the main gate is the maintenance shed, not the glasshouse. Vehicles may use its driveway, so walkers should remain on the blue route.
Keira Mallon	At the end of your visit, the shuttle bus will collect passengers from the bay directly east of the main gate. The ordinary public bus stop is outside the map.
Keira Mallon	Now I will suggest what to notice in four sectors. In the Alpine sector, low conifers form sheltered shapes that remain easy to examine even when the exposed beds are frosty.
Keira Mallon	In the Eucalypt sector, winter light makes differences in bark colour particularly clear. Flowers are scarce there in July, despite what an old leaflet suggests.
Keira Mallon	The Rainforest sector has an indoor interpretation display beside the humid house. Its labels explain leaf structure; the outdoor sound installation is switched off this season.
Keira Mallon	At the Research plots, staff have left numbered tags beside the winter measurements. You may read them from the path, but they are working labels rather than a public exhibition.
Keira Mallon	The lake sector is attractive, but it is not included in the guided winter route. Its boardwalk is open only as far as the first bench.

Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Keira Mallon	To recap the route, use the surfaced loop for every named destination. The lawn shortcut, hill steps, damaged bridge and maintenance driveway are not part of the accessible circuit.
Keira Mallon	Staff in green jackets can help with directions. They will not unlock closed paths, even if a group has used that route on a previous summer visit.
Keira Mallon	Please allow about ninety minutes, return borrowed magnifiers at the visitor centre, and wait at the marked shuttle bay if you booked accessible transport. The final shuttle leaves at four.

Part 3 - Educational discussion: architecture students revise a classroom daylight-monitoring study in Leeds

Talia Northcott	The pilot readings looked impressive until I placed the two lux meters side by side. One was consistently about twelve percent higher than the other.
Jago Maberly	So the apparent difference between classrooms may partly be an instrument difference. We need one reference check before the main study, not merely fresh batteries.
Talia Northcott	Agreed. The calibration card gives us a stable reference condition. We can record each meter’s offset and use the same device in the same room afterwards.
Jago Maberly	The clocks caused another problem. My meter logged at ten-minute intervals, but its internal clock was four minutes behind yours.
Talia Northcott	That is the most serious flaw in the pilot because we compared readings as if they were simultaneous. We should synchronise both clocks before every session.
Jago Maberly	I originally thought the changing cloud cover was the main fault. It mattered, but unsynchronised readings made even a stable period difficult to compare.
Talia Northcott	Desk position was inconsistent too. A seminar group moved three tables closer to the windows, so our second-day points were not at the marked distances.
Jago Maberly	Let us put removable floor markers under the tripod positions. A floor plan alone will not stop furniture being moved between visits.
Talia Northcott	What did you think of the occupancy sheet? We asked the lecturer for numbers after class, but estimates such as about twenty were too vague.
Jago Maberly	And several students arrived while we were taking readings. I suggest a simple door count at each measurement, then a brief occupancy log with arrival changes.
Talia Northcott	That would separate the effect of people blocking light from a change in daylight itself. Names are unnecessary; we only need counts.
Jago Maberly	The blinds were worse. In Room A they were half lowered, while in Room B one was tilted and another fully open. We just wrote blinds adjusted.
Talia Northcott	A photograph from the doorway plus a simple position code would make that condition repeatable. We should never adjust a blind without recording it.
Jago Maberly	For the room sample, I wanted the largest lecture theatre and the smallest studio to maximise contrast.
Talia Northcott	That creates too many confounds. Two rooms of similar size and orientation, but with different shading devices, would give a cleaner comparison.

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Jago Maberly	Yes, similar rooms is the stronger choice. We can describe the theatre separately as an exploratory observation, not part of the paired dataset.
Talia Northcott	How often should we sample? Continuous logging sounds ideal, yet we have only two borrowed meters and the course requires observations across three days.
Jago Maberly	Let us take paired readings at fixed morning, midday and afternoon times, with a documented contingency if cloud changes sharply during a pair.
Talia Northcott	We should define each window narrowly enough for comparison but allow time to move the equipment. Twenty minutes per window seems practical for two nearby rooms.
Jago Maberly	I will add a sky-condition box with simple categories and a comments line. The category supports comparison, while the note can record an unusually fast transition.
Talia Northcott	We also need a short observer guide. It should specify desk height, horizontal sensor position and when to pause because someone is standing directly over the meter.
Jago Maberly	That will reduce differences between observers. We can test the guide by swapping rooms and checking whether our recorded positions and conditions still agree. A short rehearsal should also show whether both observers interpret the categories in the same way. If their records differ, we can revise the guide before collecting the main dataset and avoid carrying disagreement forward.
Talia Northcott	That gives consistent windows and a rule for unstable weather. Random times would broaden coverage, but comparisons between rooms would become weaker.
Jago Maberly	All right. Suppose we ran the field session again. Where would you begin, given that the two meters did not agree?
Talia Northcott	I would check both instruments against the same reference before taking any classroom readings. That should show whether one meter needs recalibration.
Jago Maberly	For tables that have moved, removable floor markers will restore the tripod positions. The floor plan remains useful, but it was not enough by itself.
Talia Northcott	When occupancy changes during a reading, we will count users at that measurement and note arrivals. We need totals, never names.
Jago Maberly	For inconsistent blind positions, we will photograph the setting and assign it a simple code. That is clearer than writing adjusted.
Talia Northcott	Finally, if cloud cover changes rapidly, we will repeat the paired readings. We can trial the revised sheet tomorrow before the three-day study begins.

Part 4 - Academic monologue: annual lake-sediment layers and chronology in an Edmonton earth-science lecture

Lecturer	Today we will examine varves, the repeating sediment layers that can preserve an annual rhythm in some lakes. The crucial phrase is in some lakes, not every lake.
Lecturer	A common pair forms because seasonal processes deliver different material. During spring snowmelt, streams may carry pale silt into the basin in a relatively energetic pulse.
Lecturer	Later, calmer summer conditions can allow darker organic material to settle. Together, the contrasting light and dark layers may represent one year.

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Lecturer	That description is a model, not a universal colour rule. Mineral composition, productivity and oxygen conditions vary, so researchers first establish how layers form at the particular lake. They observe modern deposition and test whether the proposed seasonal contrast is repeated consistently.
Lecturer	Sampling must protect the sequence. A gravity corer can recover deeper sediment efficiently, but its entry may disturb the very soft material at the sediment-water boundary.
Lecturer	Where the recent surface is essential, researchers may use a freeze corer. Frozen sediment adheres to the sampling face and can preserve delicate upper layers more clearly.
Lecturer	No device is perfect. Retrieval can compress a core, smear its edge or leave a gap. Field notes therefore record resistance, recovery length and any visible damage.
Lecturer	Back in the laboratory, the core is split, photographed and described. Investigators may count layer pairs under a microscope where boundaries are too fine for the unaided eye. High-resolution images let analysts revisit the same boundary and document why a doubtful line was included or rejected.
Lecturer	Counting begins from a known surface and moves downward. Two analysts often count independently, compare disagreements and return to ambiguous sections rather than averaging them blindly.
Lecturer	A marker horizon provides an external checkpoint. A distinctive volcanic ash layer, for example, may be linked to a dated eruption if its identity is independently established.
Lecturer	A second external checkpoint may come from an independent dating method applied over a suitable interval. Agreement increases confidence; disagreement prompts scientists to inspect missing, duplicated or disturbed layers.
Lecturer	One major disturbance is bioturbation, the mixing of sediment by organisms. Burrowing can blur boundaries, redistribute particles and make an apparently smooth band span more than one season.
Lecturer	Physical events also interrupt the pattern. A flood or slope failure may deposit a thick event bed in hours. Counting that bed as an ordinary annual pair would create an error.
Lecturer	At other points, a weak seasonal layer may be absent or too thin to recognise. The chronology must therefore include uncertainty, not just a neat list of integers. Researchers may publish minimum and maximum counts for an ambiguous interval and explain which interpretation they prefer.
Lecturer	Once a chronology is defensible, properties within layers become environmental indicators. Grain size may reflect transport energy, while biological remains can indicate ecological conditions.
Lecturer	Chemical or optical scanning produces dense measurements along a core, but an instrument signal is a proxy. It requires calibration against sampled material and cannot interpret itself. A bright band may correlate with one material at one site yet require a different explanation elsewhere.
Lecturer	At this stage, the chronology itself needs a test independent of visual counting. Radiometric dating can check an interval against physical decay, so agreement supports the count without simply repeating the analyst's judgement.

Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Lecturer	That comparison is meaningful only if sampling has preserved the sequence. Retrieval may stretch, smear or shorten a core, and the recovery notes must distinguish those effects before depths are converted into time.
Lecturer	Core compression is particularly important because it shortens the recovered sequence and changes apparent layer thickness. Smearing mainly obscures boundaries, while a gap removes material altogether; none should be treated as an ordinary annual transition.
Lecturer	Once the depth scale is secure, grain size, biological remains and chemical signals can be interpreted as environmental proxies. Each proxy still requires local calibration; the same bright band can arise from different materials in different basins.
Lecturer	A record from one basin may reflect a local flood, catchment change or sampling disturbance. Researchers therefore look beyond a single core before describing an event as regional.
Lecturer	The stronger spatial test is comparison across multiple lakes. If separately dated records show the same transition, a broader process becomes more plausible, although agreement alone does not explain the mechanism.
Lecturer	Resolution also sets a limit. Annual layers may support year-scale counting, whereas a chemical measurement taken every few millimetres can combine adjacent seasons and should not be described as if it were monthly.
Lecturer	Most importantly, varves establish timing and association more readily than exact causes. A causal claim needs independent environmental evidence, a plausible mechanism and an account of alternatives that the observations do not rule out.
Lecturer	The method is strongest as a chain: seasonal formation, careful recovery, reproducible counting, external checks and cautious comparison. A precise-looking chronology is credible only when uncertainty is retained at each stage and conclusions remain proportional to the archive.

Speaking

Examiner-delivered Speaking script

Part1

Administrative Examiner Turns

- {{TIME_APPROPRIATE_GREETING}}. My name is {{EXAMINER_NAME}}. Can you tell me your full name, please?

- May I see your identification, please?

Topic Groups

Topic Groups 1

Questions

- How might you know that a visitor has arrived?

- Would you prefer a knock, a message, or another way of knowing?

- Can being told that a visitor has arrived ever be inconvenient?

- Does the best way of knowing depend on the situation?

Topic Transition	Let's talk about how people know when someone has arrived.

Topic Groups 2

Questions

- When, if ever, do you take a reusable bag when you go shopping?

- Is it easy or difficult for you to remember to take one?

- What might make you choose not to use a reusable bag?

- Has your use of shopping bags changed over time?

Topic Transition	Now, let's talk about reusable shopping bags.

Topic Groups 3

Questions

- How common are compliments or kind words in your everyday life, if at all?

- In what situations, if any, do you notice people using kind words?

- When you are with other people, are some kinds of praise easier for you to accept than others?

- What can make kind words seem sincere or useful?

Topic Transition	Now, let's talk about compliments and kind words.

Part2

Opening Examiner Turns

- Now I'm going to give you a topic, and I'd like you to talk about it for one to two minutes.

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

- You have one minute to prepare. You can make some notes if you wish.

Rounding Questions

- Do you think this person is usually calm?

- Would you react in the same way in a similar situation?

Preparation Examiner Turn	You can begin preparing now.
Long Turn Start Examiner Turn	All right. Remember, you have one to two minutes for this, so don't worry if I stop you. Please begin.
Support Examiner Turn	Can you tell me a little more about that?
Stop Examiner Turn	Thank you.
Closing Examiner Turn	Thank you. Now we'll move on to Part 3.

Part3

Core Questions

- Why can staying calm influence the quality of a decision?

- How can people train themselves to respond well under pressure?

- In what situations might acting quickly matter more than discussing every option?

- What should a leader do when a team faces a difficult situation?

- How much responsibility do organisations have for helping staff make good decisions under pressure?

- How might future technology support people who must make difficult decisions quickly?

Opening Examiner Turn	We've been talking about a person who stayed calm in a difficult situation. I'd now like to discuss decision-making under pressure in teams and organisations.
Closing Examiner Turn	Thank you. That is the end of the Speaking test.

Examiner-only controls

Exact repeat rule: One exact repeat is permitted under ordinary administration.

Part1

Primary Layout Token	{{PART1_PRIMARY_LAYOUT_ID}}
Audience	EXAMINER_ONLY_NOT_READ_ALOUD
Required Layout Id Pattern	P1-L01 through P1-L27
Layout Resolution Rule	Choose and record exactly one allowed layout before the greeting. Prompt 1 and exactly one of prompts 2-4 in each group are primary; all others are reserves.
Controller Rule	Apply the remaining-time/inventory controller at every in-position reserve and immediate probe decision.

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Part3

Primary Layout Token	{{PART3_PRIMARY_LAYOUT_ID}}
Audience	EXAMINER_ONLY_NOT_READ_ALOUD
Required Layout Id Pattern	P3-L01 through P3-L08
Layout Resolution Rule	Choose and record exactly one allowed four-primary/two-reserve progression-safe layout before the greeting.
Controller Rule	Apply the global cumulative recovery controller at every immediate eligible probe and in-position reserve decision.

Probe Rules

Part1

Allowed Exact Prompts

- Why?

- Why not?

- Can you tell me a little more about that?

Selection Rule: Use 'Why?' after an affirmative or stated view, 'Why not?' only after an explicit negative or non-use answer, and the longer neutral prompt when neither short form fits naturally.

Maximum Per Core Prompt	1
Maximum Across Part	6

Timing Use: A standard probe must immediately follow its associated answer and may be used only when the remaining-time/inventory controller requires recovery. A direct no-experience answer may receive only the assumption-free form “Can you tell me a little more about that?”; this asks about the answer and does not demand an experience. Never start a standard probe after 4:35.

Neutrality Rule	Do not add a noun, reason, example, comparison, opinion, vocabulary item or answer route; do not challenge a direct no-experience response.

Documented Accessibility Exception: A second neutral probe on one administered core prompt is permitted only under a separately documented accessibility mode. Without a separate timing adjustment it counts within, and may replace rather than add to, the six-probe part-wide standard cap. With a separately approved timing adjustment, that adjustment governs.

Part3

- Start the Part 3 clock with the first word of its opening turn. Ask all four predeclared primaries in fixed progression unless an unexpected non-standard event invokes the accommodation/interruption boundary.

- Use the two ordered reserves and at most four standard neutral probes only through the global cumulative recovery controller; no new topic, lane, premise or answer route is permitted.

- Traverse orders 1-6 once. A skipped reserve remains skipped; no lower-stage question may follow a later-stage lane.

- Once projected natural close is at least 4:00, stop optional recovery. Do not start a reserve after 4:25 or a standard probe after 4:35. At 4:52 permit only the current sentence for up to five seconds and close by 5:00.

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

- One exact repeat is permitted without paraphrase. The exact candidateControlPartition accessibility and approved-accommodation rules are operative.

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Stop rules

Part1: Start both the Part 1 subclock and continuous whole-test clock with the first word of the resolved time-appropriate greeting; greeting, introduction, identity confirmation and ID check remain inside Part 1. Do not start a reserve or primary after 4:30 or a standard probe after 4:35. At 4:52 allow only the current sentence to finish for up to five seconds, then politely close; complete the transition by 5:00.

Part2: At 1:55, allow the current sentence to continue for at most five more seconds. At 2:00, politely interrupt with 'Thank you.' The five-second sentence-completion allowance is inside, never after, the two-minute long-turn limit.

Part3: Once projected natural close is at least 4:00, stop optional recovery. Do not start a reserve after 4:25 or a standard probe after 4:35. At 4:52 permit only the current sentence for up to five seconds and close by 5:00. One exact repeat is permitted without paraphrase. The exact candidateControlPartition accessibility and approved-accommodation rules are operative.
