IELTS ACADEMIC · STUDENT WORKSHEET

IELTS Academic Set 26

All sections

Name: _____ Date: _____

HOW TO USE THIS WORKSHEET

Work through each IELTS part in order. Reading passages stay with their questions; charts and diagrams appear next to their tasks. Open the live practice page for Listening audio and Speaking recordings.

Staff solutions and scripts are supplied separately.

Listening

Use the separately supplied audio. Write one response for each question.

You will hear four recordings. You will hear each recording once only.

A separate two-minute computer check follows the recording.

Part 1

Questions 1-6

Complete the appointment form. Write NO MORE THAN TWO WORDS AND/OR A NUMBER for each answer.

1. Document requiring certification: birth _____

2. Number of certified copies: _____

3. Appointment day: _____

4. Appointment time: _____

5. Photo identification to bring: _____

6. Chosen return method: _____

Questions 7-10

Answer the questions. Write NO MORE THAN TWO WORDS for each answer.

7. Which professional will certify Tessa’s copies?

8. What must be written clearly beside the certifier’s signature?

9. What should Tessa bring to show the receiving organisation’s requirements?

10. What will appear on both the confirmation email and courier label?

Part 2

Questions 11-15

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Choose the correct instruction, A-G, for each item.

11. Which instruction does Maeve give about the buoyancy aid?

- **A** show it to the assistant at the riverside gate
- **B** leave it where it is until a staff member removes it
- **C** collect it from reception after the safety talk
- **D** wait until your surname is called before taking it
- **E** hand it back separately from the rest of the equipment
- **F** place it on the marked bench before meeting your partner
- **G** attach the numbered tag supplied at check-in

12. Which instruction does Maeve give about the whistle?

13. Which instruction does Maeve give about the spare paddle?

14. Which instruction does Maeve give about the dry bag?

15. Which instruction does Maeve give about the throw line?

Questions 16-20

Choose the correct letter, A, B or C.

16. Which changing room should beginners use today?

- **A** the upstairs room
- **B** the ground-floor room
- **C** the outdoor shelter

17. Who enters the water first?

- **A** the instructor
- **B** the first pair of paddlers
- **C** the bank assistant

18. What do two short whistle blasts mean?

- **A** Look towards the instructor.
- **B** Gather near the bank.
- **C** Leave by the nearest safe landing point.

19. Who makes the decision to cancel a session?

- **A** the booking contact
- **B** each participant
- **C** the centre manager

20. What should paddlers do with damaged equipment after returning?

- **A** Report it before cleaning it.
- **B** Place it in a locker.
- **C** Repair it at the hose.

Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Part 3

Questions 21-25

Choose the correct revision, A-G, for each programme item.

21. What revision do the producers agree for the opening headlines?

- **A** replace it with listener contributions
- **B** shorten it to one sentence per story
- **C** remove it from the programme completely
- **D** edit it to a maximum of two minutes
- **E** record it again with a different speaker
- **F** move it to an earlier position
- **G** refer to a topic instead of a named person

22. What revision do the producers agree for the recorded market interview?

23. What revision do the producers agree for the traffic bulletin?

24. What revision do the producers agree for the empty studio-guest slot?

25. What revision do the producers agree for the closing trail?

Questions 26-30

Complete the sentences. Write NO MORE THAN TWO WORDS for each answer.

26. All changes will be entered in the shared _____.

27. The producers will backtime from the fixed _____.

28. The final market insert will last _____.

29. The continuity cue will be shown in _____.

30. Before rehearsal, the producers will check the _____.

Part 4

Questions 31-36

Complete the flow chart. Write NO MORE THAN TWO WORDS for each answer.

31. Urban combustion releases _____.

32. Agriculture is an important regional source of _____.

33. Oxidation of the first precursor can produce _____.

34. Reaction with the second gas can form _____.

35. The particle phase is generally favoured by _____.

36. Laboratories analyse _____ for nitrate and ammonium ions.

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Questions 37-40

Choose the correct letter, A, B or C.

37. What primarily explains the seasonal shift of nitrate between gas and particle phases?

A Changes in the distance travelled by agricultural air masses

B Changes in the type of filter used at monitoring stations

C Changes in atmospheric temperature

38. What is the main limitation of a total particle-mass measurement?

A It does not distinguish the chemical components of the particles.

B It may conceal rapid changes when results are reported as daily averages.

C It represents a smaller volume of air at urban-background sites.

39. Why may a filter measurement underestimate nitrate?

A Some gases can be retained and counted with the particles.

B Some collected ammonium nitrate can evaporate before analysis.

C Some continuous instruments require calibration against filters.

40. Which approach best represents the lecturer's central recommendation?

A Prioritise continuous roadside measurements because they reveal rapid change.

B Use filter composition as the main result and treat weather as background context.

C Combine multiple measurement methods with precursor and meteorological evidence.

Reading

Read the three passages and answer Questions 1-40. You have 60 minutes, including checking time.

Original unofficial IELTS Academic practice material aligned to the public format; it is not an official IELTS test.

Concentrating Juice with Ice

A Removing water from fruit juice makes storage and transport more efficient, but the usual method of evaporation exposes flavour compounds to heat. Freeze concentration takes another route. As a juice is cooled, relatively pure water forms ice while sugars, acids, pigments and most aroma compounds remain in the liquid. Separating the ice therefore leaves a smaller volume with a higher proportion of dissolved solids. The principle sounds simple, yet a useful plant must control where crystals begin, how quickly they grow and how much valuable liquid travels out with them. It is a separation process rather than merely an exercise in making juice cold.

B The process begins in a chilled feed tank, where the incoming juice can be mixed into a uniform batch and coarse particles removed. A pump then sends it through a heat exchanger that recovers cold from outgoing streams and lowers the temperature before crystallisation. Engineers monitor dissolved solids because their concentration affects both product quality and the temperature at which freezing begins. Fruit juice does not freeze at one fixed point like pure water. As the liquid becomes more concentrated, the freezing point falls, so later stages require progressively colder conditions. Pre-cooling reduces the load on the main crystalliser and helps avoid abrupt, poorly controlled freezing.

C In one common arrangement, the juice enters a scraped-surface crystalliser. Refrigerant flows through a cooling jacket around the chamber, and a thin frozen layer forms on the cold inner wall. Rotating scraper blades remove that layer before it becomes a solid block. The fragments return to the moving liquid and act as sites for further crystal growth. Gentle cooling and sufficient residence time favour larger crystals, which are easier to separate than a cloud of tiny particles. If cooling is too rapid, numerous small crystals appear; their combined surface can trap more concentrated liquid. Agitation must therefore keep the mixture mobile without breaking the growing crystals excessively.

D The result is an ice slurry: crystals suspended in concentrated juice. It is pumped from the crystalliser into a wash column, where carefully controlled pressure makes the solid and liquid phases move differently. Pressure or mechanical action compacts the crystals into a dense porous bed. Mother liquor drains from spaces between compacted crystals back towards the concentration circuit. This is the critical separation step. A crystal may be almost pure water internally, but concentrate clinging to its surface represents lost product. Merely collecting the visible ice would consequently give a poor yield and produce a waste stream rich in flavour and sugar.

E Near the top of the column, a small quantity of wash water moves against the compacted crystal bed and displaces adhering mother liquor. The cleaned ice crosses a melting zone and leaves as ice melt, while the concentrated juice is collected separately at the concentrate outlet. Some systems recycle part of either stream to stabilise flow. The balance is delicate: too little washing sacrifices product, whereas excessive washing can dilute the concentrate and increase the energy needed for another pass. Operators compare the solids content of the feed, concentrate and melt stream to judge whether the separator is recovering juice effectively.

F A single pass cannot usually remove all the desired water. As concentration rises, viscosity increases and pumping becomes harder; the lower freezing point also demands more refrigeration. Plants may therefore use several stages, each operating at a colder condition, or stop at a moderate concentration that protects quality. Crystal size is affected by residence time, temperature difference and the amount of surface available for growth. These variables interact. Extending residence time can enlarge crystals, for example, but also reduces throughput unless equipment volume increases. Successful design is a compromise among separation efficiency, energy use, product loss and the rate of production.

G The chief attraction is the low processing temperature. Volatile aromas that might be driven away during evaporation can remain with the concentrate, and heat-sensitive colours or nutrients may be better preserved. This does not make freeze concentration superior. Refrigeration and separation equipment cost money, and washed ice can carry away valuable solids. The technique is most persuasive when freshness commands a premium or when recovered cold can be reused. Its performance must be measured across the whole loop, not inferred from the purity of one crystal. Good results come from coordinating pre-cooling, crystal growth, washing, recycling and product specifications.

Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Questions 1-6

Label the diagram below. Choose NO MORE THAN TWO WORDS from the passage for each answer.

A continuous freeze-concentration system

Raw juice enters the 1 ____. A pump sends it through a 2 ____. In the crystalliser, a 3 ____ surrounds the chamber and rotating 4 ____ blades clear frozen material from the wall. The resulting 5 ____ enters the wash 6 ____ for solid-liquid separation.

Questions 7-13

Complete the flow chart below. Choose NO MORE THAN TWO WORDS from the passage for each answer.

7. The concentration of 7 ____ affects product quality and the point at which freezing starts.

8. As the liquid becomes more concentrated, its 8 ____ becomes lower.

9. Slow, controlled cooling encourages larger crystals through further 9 ____.

10. Inside the separator, mother 10 ____ drains from spaces between compacted crystals.

11. A limited amount of 11 ____ removes liquid adhering to the crystal surfaces.

12. Cleaned crystals are melted and leave the system as 12 ____.

13. The product is collected separately at the 13 ____.

Memorials at the Roadside

A Flowers, photographs and handwritten messages sometimes appear beside a road after a fatal collision. Such displays may be called spontaneous or temporary memorials, although some remain for years and are renewed. Their location matters: grief is expressed at the place where a life ended, not only at a cemetery or family home. For relatives and friends, placing an object there can make an abrupt loss tangible and create a focus for repeated visits. For everyone else, however, the same verge remains part of a transport system. A private act of mourning has entered space managed for public movement, and that overlap explains both the memorial's force and the disagreements around it.

B Researchers of mourning caution against treating every display as if it carried one message. Some are maintained by close relatives; others attract school friends, neighbours or strangers. Objects can recall the person's interests, mark an anniversary, invite prayer or protest against dangerous driving. Participation also changes. A crowded site in the first week may later be tended by one person, while an online page becomes the larger meeting place. Calling the memorial spontaneous describes its origin, not the absence of conventions. Visitors often recognise shared practices, yet they negotiate what belongs there and who may alter it. The site is therefore both an expression of attachment and a changing social arrangement.

C Its public visibility can extend the audience beyond those who knew the dead person. Passing drivers may interpret flowers or a cross as a warning that a stretch of road has proved dangerous. One experimental study found that roadside memorials influenced aspects of drivers' visual attention and reported risk perception, but such results do not show that every installation changes behaviour in the same way. A memorial can attract a glance without producing safer speed, and the effect may depend on road design, traffic conditions and familiarity. Transport researchers therefore separate what participants say they noticed from claims about conduct. The sign is emotionally powerful, but its behavioural consequences require cautious measurement.

D Road authorities face responsibility. They must consider the needs of mourners alongside sight lines, safe access, maintenance work and the risk faced by anyone stopping near traffic. Policies often identify locations or materials that are unsuitable rather than imposing a single response to every case. Queensland guidance, for example, treats road-user safety, community impact, placement and upkeep as practical considerations and allows relocation or removal in specified circumstances. This example belongs to one jurisdiction; it is not a universal rule. Even so, it illustrates why officials may

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

contact a family before changing a site and why apparently minor choices, such as where visitors park, can become central.

E Conflict is not always between officials and families. Nearby residents may welcome a place of remembrance but object when candles, plastic wrapping or large structures accumulate. Different relatives can disagree about religious symbols, photographs or the tone of messages. Property boundaries further complicate the question of authority: a display visible from a public road may stand on private land, or maintenance crews may need access across the same verge. These disputes are not proof that memorialisation has failed. They reveal that the site carries several kinds of ownership at once: emotional connection, legal control and everyday use. Procedures work better when those claims are acknowledged instead of reduced to tidiness alone.

F Time alters the meaning of the objects. Weather fades photographs and ribbons, while repeated replacement signals that the dead person remains present in a community's memory. A council may describe the installation as temporary, but a family may experience a proposed removal as a second loss. Conversely, an unattended display can be interpreted by residents as abandoned even when relatives still value the location. Researchers interested in collective memory examine these transitions because informal sites can connect personal stories with public narratives about danger, youth or neighbourhood identity. The memorial does not simply preserve one fixed account; it provides a place where meanings are added, contested and sometimes allowed to disappear.

G A durable policy therefore needs discretion bounded by clear reasons. Automatic removal ignores the social work performed by memorials, while unlimited permission can neglect safety and unequal access to public space. Consultation should be proportionate: an urgent hazard may require immediate action, but maintenance usually allows time for contact and explanation. Authorities can publish clear location rules, offer safer alternatives and record why a site was moved. Families, for their part, benefit from knowing who will maintain an installation and how long it may remain. No procedure can remove grief or prevent disagreement. It can, however, replace surprise with an intelligible process and treat remembrance as a legitimate public concern rather than an obstacle on the verge.

Questions 14-20

Choose the correct letter, A, B, C or D.

14. What central tension does paragraph A identify?

A Memorials are expensive to preserve in bad weather.

B A personal expression occupies space used and managed by others.

C Families prefer cemeteries but authorities require roadside sites.

D Most memorials are removed before friends can visit them.

15. What point does the writer make about the word spontaneous?

A It refers to how a memorial begins, not to a complete lack of conventions.

B It should be used only when strangers build the memorial.

C It proves that objects have been placed without family approval.

D It distinguishes physical sites from online memorial pages.

16. Why does the writer mention the experimental study?

A To prove memorials always cause drivers to reduce speed

B To show why memorials should use identical visual designs

C To illustrate evidence that requires limits when interpreting behaviour

D To argue that driver attention cannot be measured reliably

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

17. Why is Queensland guidance included?

A To provide a verified example of factors considered in one jurisdiction

B To establish a rule that all English-speaking countries follow

C To demonstrate that families usually oppose relocation

D To compare the costs of several national policies

18. What do disputes about a memorial reveal, according to paragraph E?

A Legal ownership always outweighs emotional connection.

B Only local residents should decide what objects are suitable.

C Large structures are more meaningful than small objects.

D Several different claims to the same site can coexist.

19. How can weathered objects affect interpretation?

A They always show that relatives have abandoned the site.

B They interact with renewal or non-renewal to shape perceived meaning.

C They make a memorial legally permanent.

D They prevent the site from joining collective memory.

20. Which policy does the writer support?

A Immediate removal of every informal memorial

B Permanent permission without maintenance conditions

C Clear reasons combined with proportionate discretion and consultation

D Decisions made only by people who knew the deceased

Questions 21-26

Match each statement with the correct group, A-D. You may use any letter more than once.

21. distinguish evidence of attention from claims about lasting driving behaviour

22. may experience removal as a renewed form of loss

23. study how an informal site links personal stories to broader public narratives

24. must take account of visibility, access and maintenance duties

25. can use objects to recall the interests of the person who died

26. may offer relocation when the original position creates a hazard

Paying for Outcomes in Public Services

A Public agencies have bought inputs or activities: a number of training hours, staffed beds or visits delivered. Outcome-based service contracts shift attention towards a change in people's circumstances, such as sustained employment, stable housing or improved health. Payment may depend on evidence that the change occurred. The attraction is clear. Providers gain room to choose methods, while commissioners appear to purchase social value rather than motion. Yet this apparent simplicity conceals a chain of decisions. Someone must define the outcome, establish a baseline, decide when payment is triggered and determine how much of the observed change can reasonably be linked to the service.

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

B The problem is measurement. An outcome must represent the purpose but be precise enough to verify. A narrow metric, such as obtaining any job, may reward quick placement while ignoring whether employment lasts or suits the participant. A broad aim, such as improved wellbeing, may capture what matters but be difficult to measure. Combining indicators can reduce one distortion and create another by making the formula opaque. The sensible response is not to abandon measurement, but to treat the metric as a model of success rather than success itself. Contracts need both a payment rule and a wider account of quality that remains visible when one number improves.

C Baseline design determines what counts as progress. If providers work with people who begin from different positions, a single threshold may reward easy cases and make complex support financially unattractive. Adjusting payments for prior circumstances can help, but the model then relies on data and contestable assumptions about expected progress. This is one route to selection behaviour, in which organisations prefer participants likely to meet the target, and parking, in which harder cases receive less attention. Such behaviour is not an inevitable moral failure by providers. It can be a response when a payment formula assigns risk without recognising differences in need.

D Attribution is harder. Employment can rise because the economy improves; health may change through treatment received elsewhere; housing stability can depend on rent levels. A contract can verify that an outcome followed a service without proving that the service caused it. Comparison groups, trends and staged evaluation can strengthen inference, but each has limitations in programmes. Commissioners therefore make a judgment about how much causal certainty is proportionate to the payment at stake. The more money attached to a disputed measure, the stronger the pressure for evidence and challenge. Outcome contracting cannot eliminate uncertainty; it decides how institutions will act while uncertainty remains.

E Risk transfer is presented as a virtue because public funds are paid only after results. In reality, risk does not disappear when it moves from commissioner to provider. Large organisations may finance staff while waiting for delayed payments; small charities may be unable to carry the cash-flow burden even when they understand local needs. Providers also charge for taking risk, so an apparently protective arrangement can raise the price. Public guidance consequently warns against transferring risks to a party that cannot manage them. Allocation should follow control: a provider can influence service quality, but it cannot control a regional recession or every decision made by another agency.

F Payment triggers also shape information. When evidence is collected chiefly to release money, staff have a strong reason to document success but less reason to record near misses, displacement or effects that occur after the measurement window. Verification protects against unsupported claims, yet excessive reporting can divert resources from delivery. Good contract management uses audits and data checks while preserving routes for qualitative evidence from service users. It also defines how disagreements will be resolved before a payment is due. Without an appeal process, the commissioner acts as designer, purchaser and final judge. That concentration of roles may weaken trust even when individual decisions are defensible.

G Supporters argue that provider flexibility encourages innovation. This can happen when the outcome is clear and organisations are free to adapt. It is less convincing when activity rules remain in place alongside outcome risk; providers then face both prescriptive control and uncertain payment. Innovation can make comparison difficult if each organisation delivers a different model. The answer is not to standardise every action, because doing so would restore the input contract by another name. Commissioners can instead specify minimum safeguards, require an explanation of the service model and compare patterns across providers. Learning depends on knowing not only whether a target was met, but also what was tried and for whom.

H The strongest case for outcome contracts is therefore conditional. They can align attention with public goals when outcomes are measurable, the provider has meaningful influence, risk is affordable and monitoring examines unintended effects. They are weaker when attribution is remote, data arrive too late or the payment formula discourages work with people who need the most support. Accountability must extend beyond the trigger that releases funds. Elected bodies and service users need to know how priorities were chosen, who carried risk and what happened outside the metric. An outcome contract is not a substitute for public judgment. It is one governance tool whose incentives, evidence and distributional effects require scrutiny.

Questions 27-33

Do the following statements agree with the views of the writer? Write YES, NO or NOT GIVEN.

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

27. Outcome-based contracts can give providers greater freedom over delivery methods.

28. A payment metric should be regarded as a complete definition of public success.

29. All providers deliberately avoid participants with complex needs.

30. Observed improvement after a service does not by itself prove that the service caused it.

31. Moving financial risk to providers always reduces the total price paid by government.

32. The passage states that charities receive outcome payments more quickly than large companies.

33. Accountability should cover consequences that are not captured by the payment trigger.

Questions 34-40

Which paragraph contains the following information? Choose the correct letter, A-H. You may use any letter more than once.

34. an explanation of why a single threshold may influence which clients are preferred

35. a warning that the organisation receiving a risk may be unable to control it

36. a reason why positive results may be recorded more fully than other effects

37. a distinction between events occurring in sequence and proof of causation

38. a proposal for preserving flexibility while still making different providers intelligible

39. a description of the decisions hidden inside the apparently simple purchasing model

40. conditions under which the approach has its strongest justification

Writing

Writing Task 1

- You should spend about 20 minutes on this task.
- Write at least 150 words.

The bar chart below shows the amount of water used for pools, showers and cleaning at a fictional municipal swimming centre during four seasons of one year.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Writing Task 2

- You should spend about 40 minutes on this task.
- Write about the following topic.
- Give reasons for your answer and include any relevant examples from your own knowledge or experience.
- Write at least 250 words.

In many crowded city centres, some people think that shops should receive most deliveries at night to reduce daytime traffic. Others believe that deliveries should mainly take place during the day to limit noise and disruption for nearby residents.

Discuss both views and give your own opinion.

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Speaking

Part 1

Topic 1

Let's talk about keys and locks.

- What kinds of keys, if any, do you usually carry?
- Have you ever forgotten where you put a key?
- Would you rather use a physical key or a digital way of opening a door? Why?
- Do you think you will carry fewer keys in the future?

Topic 2

Now, let's talk about short breaks.

- When do you usually take a short break during a busy day?
- What do you like to do during a short break?
- Are short breaks easy to take when you are working or studying?
- How does a short break affect your concentration?

Topic 3

Now, let's talk about birds near where you live.

- Do you often notice birds near where you live?
- Where is a good place in your area to watch or listen to birds?
- Would you like to learn the names of more local birds?
- Have you noticed any change in the birds in your area in recent years?

Part 2

- Now I'm going to give you a topic, and I'd like you to talk about it for one to two minutes.
- You have one minute to prepare. You can make some notes if you wish.

Describe a person who made something difficult easy for you to understand.

You should say:

- who the person was and what they explained
- when or where the explanation took place
- how the person explained it

and explain why the explanation was effective.

- Do you still use what this person explained?
- Would this person explain the same subject well to a large group?

Thank you. Now we'll move on to Part 3.

Part 3

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

We've been talking about a person who explained something clearly. I'd now like to discuss instructions and explanations more generally.

- What usually makes a set of instructions easy to follow?
- Is expert knowledge more important than communication skill when someone gives instructions?
- When are pictures more useful than written instructions?
- Who should take responsibility when people misunderstand important instructions?
- Should public services use the same standard wording for instructions in different places?
- How might automated assistants change the way people receive instructions in the future?

Thank you. That is the end of the Speaking test.
