IELTS ACADEMIC · STUDENT WORKSHEET

IELTS Academic Set 36

All sections

Name: _____ Date: _____

HOW TO USE THIS WORKSHEET

Work through each IELTS part in order. Reading passages stay with their questions; charts and diagrams appear next to their tasks. Open the live practice page for Listening audio and Speaking recordings.

Staff solutions and scripts are supplied separately.

Listening

Use the separately supplied audio. Write one response for each question.

You will hear four recordings. You will hear each recording once only.

Answer all questions and follow the word limit printed above each group.

A separate two-minute computer answer-check period follows the recording and is not synthesised as silence.

Part 1

Questions 1-6

Complete the notes. Write NO MORE THAN TWO WORDS AND/OR A NUMBER for each answer.

1. Customer surname: _____

2. Room: _____

3. Window faces: _____

4. Window width: _____ cm

5. Visit date: _____

6. Adviser will bring a _____ card.

Questions 7-10

Answer the questions. Write NO MORE THAN TWO WORDS AND/OR A NUMBER for each answer.

7. When is glare worst?

8. What must remain visible through the glass?

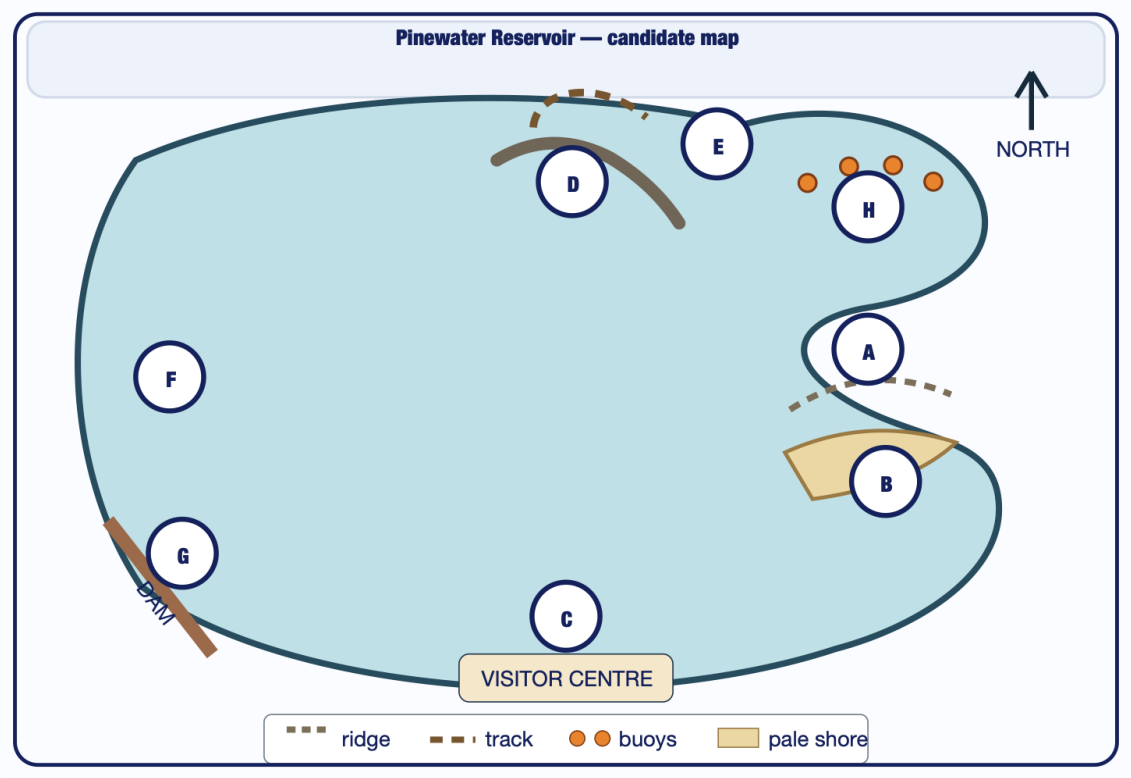

9. Which film type is preferred?

10. What will the adviser inspect first?

Part 2

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Candidate map / plan

Questions 11-16

Label the plan or map. Choose the correct letter.

11. Main launch ramp

A Location A

B Location B

C Location C

D Location D

E Location E

F Location F

G Location G

H Location H

12. Alternative launch ramp

13. Sheltered inlet

14. Nesting exclusion zone

15. Portage path

16. Emergency landing beach

Questions 17-20

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Choose the correct letter for each item.

17. North picnic point

- **A** no landing permitted
- **B** normal stopping place
- **C** carry boats on foot
- **D** use only in an emergency
- **E** launch only with ranger approval

18. Emergency beach

19. Nesting buoy line

20. Portage path

Part 3

Questions 21-25

Choose the correct letter, A, B or C.

21. What caused the main problem in the pilot?

- **A** the catalogue records were incomplete
- **B** participants used a familiar shortcut
- **C** the shelf labels were too small

22. How will the revised study limit prior knowledge?

- **A** hide the book titles
- **B** exclude all current students
- **C** use a less familiar floor

23. What will remain identical in both conditions?

- **A** the route shown on screen
- **B** the target books
- **C** the colour of every shelf label

24. What is the primary outcome measure?

- **A** time to locate the target
- **B** accuracy of title recall
- **C** number of questions asked

25. Why will observers use a coded route sheet?

- **A** to calculate walking distance automatically
- **B** to conceal the floor number
- **C** to record choices consistently

Questions 26-30

Complete the notes. Write NO MORE THAN TWO WORDS for each answer.

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

26. Participants receive one printed _____.

27. The digital condition shows a location _____.

28. Observers record each wrong _____.

29. A short survey measures perceived _____.

30. Crispin will prepare the random _____.

Part 4

Questions 31-36

Complete the notes. Write NO MORE THAN TWO WORDS for each answer.

31. Sunlight is scattered by molecules in the _____.

32. This creates a pattern of sky _____.

33. Specialised _____ detect the orientation of light waves.

34. Neural processing produces a celestial _____.

35. The pattern remains useful under partial _____.

36. The animal compares the signal with an internal _____.

Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Questions 37-40

Choose the correct letter for each item.

37. Rotating-filter experiment

A tests use when the sun is hidden

B measures limits near the horizon

C separates clock shift from visual cue

D shows response to a rotated light pattern

E confirms a role for specialised receptors

38. Screened-sun experiment

39. Clock-shift experiment

40. Eye-cover experiment

Reading

Answer all 40 questions. Follow the word limit shown for each completion task.

Compressed air from falling water

A A trompe is a hydraulic air compressor whose main moving material is water. It has no piston cycling inside a cylinder. Instead, falling water captures bubbles of air and carries them down a shaft. As the mixture descends, increasing water pressure compresses the bubbles. At depth, air and water are separated so the compressed air can be collected while water leaves by another route. The simplicity is deceptive: dependable operation requires suitable height, flow and geometry.

B Water enters a vertical pipe through a shaped inlet. Openings near the top act as air ports. The rapid stream draws air through them and breaks it into bubbles. Large pockets rise too easily, while extremely fine bubbles may be harder to separate later, so the inlet must create a useful mixture. There is no mechanical pump forcing each bubble downward; the descending water provides both transport and compression.

C The falling shaft determines how much hydrostatic pressure can develop. Greater depth can support higher pressure, but excavation and water management become more demanding. Friction and turbulence also consume energy. The shaft is therefore not simply made as long as possible. Designers balance the pressure required at the workshop against the available drop and flow. A site with abundant water but little vertical height may be less suitable than a smaller stream crossing steep ground.

D At the bottom, the mixture enters a separation chamber where velocity falls. Water continues towards an outlet, while compressed air gathers above it and enters a delivery pipe. Maintaining the interface is essential: if water rises too far, it can enter the air line; if it falls too low, compressed air may escape with the tailrace. The chamber is therefore both collector and regulator, even though it contains no complex rotating machinery.

E The air delivered by a trompe can serve tasks such as ventilating or supplying a furnace, depending on the installation. Contact with water may also cool the compressed air. These advantages once suited sites where water power was available and mechanical compressors were difficult to maintain. The air, however, may carry moisture, which is beneficial for some uses and troublesome for others. A separator or drainage arrangement may therefore be needed beyond the main chamber.

F The technology is strongly site-dependent. It consumes a continuous water flow and needs a sufficient drop, while the discharged water must have somewhere to go. A mine or metalworking site near suitable terrain could benefit; a flat or water-scarce location could not reproduce that advantage merely by copying the equipment. This dependence explains both historical success and limited spread. The trompe converted a particular landscape into pressure rather than offering a portable source of power.

G Judging efficiency requires a boundary around the whole system. Water may be locally abundant and require no purchased fuel, yet civil works, leakage and unused flow still carry costs. Conversely, an apparatus with few mechanical parts may offer long service where repair skills are scarce. The trompe shows why technology cannot be evaluated from a component list alone. Its performance emerges from the relation between fluid process, terrain, maintenance and the work that the compressed air is expected to do.

H Using flowing water without combustion can appear automatically benign, but the environmental account depends on the site. Diverting water may affect downstream conditions, and civil works can disturb land even when the compressor itself has few moving parts. Historical installations operated under expectations that may not match modern water stewardship. A contemporary assessment would therefore examine seasonal flow, return-water quality and competing uses as well as pressure output. This does not erase the elegance of hydraulic compression. It places that elegance inside a fuller resource budget, just as technical efficiency must be placed inside the geography that makes the process possible. Seasonal variation also changes the comparison with other compressors. A trompe sized for peak flow may deliver less air in a dry period, while workshop demand may not decline at the same time. Storage or a backup source can bridge short gaps, but each addition changes cost and complexity. Engineers therefore need a demand profile as well as a water measurement. The historical machine appears continuous only when the stream and the work happen to remain in balance.

Composing an epic in performance

A A long epic performed without a written script can look like an impossible feat of memory. Early observers often assumed that the singer had memorised a fixed text word for word. Yet comparison between performances revealed both recurrence and variation. This suggested a different model: the performer could compose during delivery by drawing on familiar phrases, scenes and narrative patterns. Memory remained crucial, but it stored resources and relationships rather than a single unchanging sequence.

B A formula is a recurring expression suited to a particular metrical position and idea. It gives the singer language that already fits the rhythm, reducing the number of decisions required at speed. Formulaic diction is not necessarily a sign of laziness or poor originality. It is part of the technique that makes fluent composition possible. A skilled performer can select, adapt and combine inherited material while responding to audience, occasion and the direction of the story.

C Recurring themes operate at a broader scale. A departure, challenge, feast or recognition scene may have a familiar sequence of actions without identical wording. These frameworks help the performer maintain narrative coherence while varying detail and emphasis. The same theme can be brief in one performance and elaborated in another. This flexibility explains how an epic can remain recognisable across occasions without existing as one fixed verbal object.

D When a performance is transcribed, a moving event becomes a written snapshot. The page preserves valuable evidence, but readers may treat accidental features of that occasion as definitive. Pauses, audience reactions and musical delivery can also be difficult to represent. A transcript is therefore both record and transformation. Comparing several recordings or texts can reveal which elements are stable and which belong to the performer's immediate choices.

E In a literate tradition, deviation from a printed poem may be called an error. In oral composition, variation can demonstrate competence if it preserves the story's logic and style. Freedom is not unlimited: metre, audience expectation and inherited narrative impose creative constraint. Expertise consists in negotiating those limits. The performer must be sufficiently traditional to remain intelligible and sufficiently responsive to make the event work in the present.

F Such skill is often acquired through prolonged listening and participation rather than through memorising a manual. An apprentice absorbs recurrent patterns, attempts shorter performances and gradually develops control over longer sequences. The process resembles learning a generative language. Knowing many expressions matters, but so does knowing when they fit. This account helps explain why direct translation of a formula may miss its practical role inside a metrical and cultural system.

G Formulaic composition complicates modern ideas of authorship. A performance is produced by an individual, yet its resources have been shaped by generations. Calling it either wholly original or merely repeated is inadequate. The singer's contribution lies in selection, arrangement, pacing and adaptation within a distributed tradition. Scholars must therefore attend to both continuity and agency. The theory does not deny artistic individuality; it locates individuality in a different relation to inherited language.

H Not every repeated phrase proves oral composition, and not every oral tradition works in the same way. Formula counts can be informative, but they need contextual evidence about metre, training and performance. A model developed from one body of epic cannot simply be imposed on all narrative cultures. The enduring contribution of the theory is more modest and more useful: it shows how recurrence can support live creation rather than merely indicate mechanical recall.

I Performance is also an exchange with listeners. Their familiarity can permit a singer to compress a well-known episode, while a ceremonial occasion may encourage elaboration. Responses during delivery can influence pacing and emphasis. These effects are difficult to recover from a silent transcript, which is why recordings and contextual notes matter. The audience does not necessarily dictate the story, but it forms part of the environment in which choices are made. Recognising this helps explain why variation is not random noise around an ideal text. Some variation is a purposeful adjustment to the social work that the epic is doing on a particular occasion. The setting can affect memory as well. Music, repeated openings and the expectation of a sequence provide cues that are absent when lines are quoted in isolation. Researchers who remove every performance feature may therefore simplify the very mechanism they hope to study. A full account connects verbal formula, narrative theme, rhythm, interaction and occasion rather than treating the words as a detached database.

Many eyes, one search

A When an object is lost across a large physical or digital space, a single searcher may inspect only a small fraction. Crowdsourcing can divide the task among many contributors. At first glance, more eyes should mean greater coverage. That expectation is reasonable only if effort is distributed. A thousand volunteers who all examine the most obvious location may add less value than a small team assigned to distinct sectors. The problem is therefore one of coordination as well as participation.

B Uncoordinated searchers sometimes bring a useful advantage: independent strategies. Different people notice different cues and question different assumptions. If every volunteer follows the same detailed hunch, the search becomes vulnerable to a shared mistake. Diversity can broaden coverage, but complete independence also creates duplication. The challenge is to preserve varied judgement while making completed work visible enough to prevent needless repetition.

C A sector board can show which areas have been assigned, checked or left open. It need not dictate exactly how each person searches. Its purpose is to expose coverage gaps and allow new volunteers to choose neglected areas. Updates must be easy to submit, otherwise the board becomes a delayed picture of yesterday's effort. Equally, a checked label should not imply certainty when the inspection was brief or visibility was poor. Status needs both location and confidence.

D Crowds generate candidate sightings as well as search coverage. These reports vary greatly in quality. Sending every one directly to field teams can overwhelm the operation, so evidence may enter a verification queue. Clear photographs, precise locations or agreement between independent observers can raise priority. Verification protects scarce response capacity, but excessive delay can make good information useless. The process must match scrutiny to the cost of acting on an error.

E Social communication can reduce duplication while increasing shared bias. A widely repeated theory may steer volunteers away from places that contradict it. Early confident posts are especially influential, even when based on weak evidence. Coordinators can counter this by reserving some search sectors for teams who have not seen the dominant hypothesis, or by asking contributors to record observations before reading others. The aim is not to suppress communication but to keep one narrative from consuming all attention.

F Volunteers offer scale and familiarity with local conditions; specialists may recognise technical evidence or manage risk. Mixed teams can combine these strengths. Yet expertise should be deployed where it changes decisions rather than used as a ceremonial label. A specialist reviewing thousands of low-information reports becomes a bottleneck. Triage, training and structured forms can help contributors supply the details that an expert needs to make a rapid judgement.

G Searches cannot expand forever. Organisers need a search threshold that considers new evidence, remaining risk and the cost of continued effort. A falling number of fresh reports does not prove the object is absent, but it may change how resources are allocated. Decisions to pause or redirect should preserve the record of completed sectors so that work can resume intelligently. Without such memory, each new surge of volunteers risks repeating the first day.

H The value of a crowd lies neither in raw numbers nor in central control alone. Effective search combines coordinated diversity: enough structure to reveal gaps and verify reports, enough independence to test different possibilities. Platforms shape this balance through assignment, updates, confidence labels and feedback. They cannot guarantee recovery, because the evidence may never be present or observable. They can, however, turn scattered goodwill into a search whose limits and coverage are understood.

I When a search ends, the record can improve the next one. Coordinators can compare planned sectors with actual coverage, identify reports that consumed effort without evidence and examine where volunteers disengaged. Privacy requires care because location trails and images may reveal personal information. A useful after-action review therefore retains operational lessons without treating every contribution as permanently public. It also distinguishes failure to find the object from failure of the search process. The object may have been outside the defined area, while the allocated sectors were examined well. Clear records allow that uncertainty to be stated rather than converted into a misleading verdict about the crowd.

1. Water enters through an inlet beside openings called _____.

2. The stream carries a mixture of water and _____ downwards.

3. Compression increases as the mixture descends the falling _____.

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

4. The flow slows in the _____.

5. Compressed air leaves through a _____.

6. Water continues from the separation chamber towards an _____.

7. Further equipment may be needed to remove _____ from the air.

8. Which paragraph contrasts a trompe with a piston compressor?

A Paragraph A

B Paragraph B

C Paragraph C

D Paragraph D

E Paragraph E

F Paragraph F

G Paragraph G

9. Which paragraph explains why simply increasing one dimension is not always sensible?

A Paragraph A

B Paragraph B

C Paragraph C

D Paragraph D

E Paragraph E

F Paragraph F

G Paragraph G

10. Which paragraph describes the consequences of an incorrect water level?

A Paragraph A

B Paragraph B

C Paragraph C

D Paragraph D

E Paragraph E

F Paragraph F

G Paragraph G

11. Which paragraph mentions both a possible benefit and drawback of contact with water?

A Paragraph A

B Paragraph B

C Paragraph C

D Paragraph D

E Paragraph E

F Paragraph F

G Paragraph G

Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

12. Which paragraph explains why the same apparatus cannot work equally well everywhere?

A Paragraph A

B Paragraph B

C Paragraph C

D Paragraph D

E Paragraph E

F Paragraph F

G Paragraph G

13. Which paragraph argues for evaluating equipment together with its surroundings and purpose?

A Paragraph A

B Paragraph B

C Paragraph C

D Paragraph D

E Paragraph E

F Paragraph F

G Paragraph G

14. The earliest explanation described in the passage treated an epic as a fixed text memorised word for word.

TRUE

FALSE

NOT GIVEN

15. Formulaic language always indicates a lack of skill.

TRUE

FALSE

NOT GIVEN

16. A recurring theme must contain exactly the same wording in every performance.

TRUE

FALSE

NOT GIVEN

17. A transcript can encourage readers to treat one performance as definitive.

TRUE

FALSE

NOT GIVEN

18. The passage states that audiences prefer the longest possible version of every scene.

TRUE

FALSE

NOT GIVEN

Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

19. Learning the tradition may involve extensive listening and gradual participation.

TRUE

FALSE

NOT GIVEN

20. The author recommends applying one oral-composition model to every culture.

TRUE

FALSE

NOT GIVEN

21. The model says memory stores resources and relationships, not an _____.

22. A recurring expression adapted to metre is called a _____.

23. A familiar sequence for a type of scene is a _____.

24. A transcription turns an event into a _____.

25. Metre and audience expectations act as a _____.

26. Inherited resources shared across generations form a _____.

27. Adding more volunteers improves coverage only when

A being overloaded by unfiltered sightings.

B reduce the risk of one shared mistaken assumption.

C follow exactly the same detailed method.

D directing too much attention towards one explanation.

E their effort is spread across different areas.

F eliminate the need for confidence judgements.

G both coverage and the reliability of each status update.

28. Independent search strategies are valuable because they

A being overloaded by unfiltered sightings.

B reduce the risk of one shared mistaken assumption.

C follow exactly the same detailed method.

D directing too much attention towards one explanation.

E their effort is spread across different areas.

F eliminate the need for confidence judgements.

G both coverage and the reliability of each status update.

Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

29. A useful sector board should show

- **A** being overloaded by unfiltered sightings.
- **B** reduce the risk of one shared mistaken assumption.
- **C** follow exactly the same detailed method.
- **D** directing too much attention towards one explanation.
- **E** their effort is spread across different areas.
- **F** eliminate the need for confidence judgements.
- **G** both coverage and the reliability of each status update.

30. A verification queue prevents field teams from

- **A** being overloaded by unfiltered sightings.
- **B** reduce the risk of one shared mistaken assumption.
- **C** follow exactly the same detailed method.
- **D** directing too much attention towards one explanation.
- **E** their effort is spread across different areas.
- **F** eliminate the need for confidence judgements.
- **G** both coverage and the reliability of each status update.

31. A dominant theory can weaken a search by

- **A** being overloaded by unfiltered sightings.
- **B** reduce the risk of one shared mistaken assumption.
- **C** follow exactly the same detailed method.
- **D** directing too much attention towards one explanation.
- **E** their effort is spread across different areas.
- **F** eliminate the need for confidence judgements.
- **G** both coverage and the reliability of each status update.

32. Why should a checked sector include a confidence indication?

- **A** To rank volunteers by speed
- **B** To hide incomplete areas
- **C** Because inspections differ in thoroughness and visibility
- **D** Because every checked area must be searched again

33. What determines how much verification a report needs?

- **A** The age of the volunteer
- **B** The cost of acting on a mistaken report
- **C** The popularity of the platform
- **D** The total size of the crowd

Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

34. What problem can occur if every report is sent to a specialist?

A Local knowledge disappears

B The search has too many sectors

C Volunteers become experts

D The specialist becomes a bottleneck

35. Which phrase best captures the author's preferred design?

A Coordinated diversity

B Unrestricted participation

C Expert control without volunteers

D A single shared hypothesis

36. The author believes that the number of volunteers alone determines search quality.

YES

NO

NOT GIVEN

37. Some duplication may occur when searchers work independently.

YES

NO

NOT GIVEN

38. The author recommends preventing volunteers from communicating with each other.

YES

NO

NOT GIVEN

39. The passage gives a fixed number of days after which every search should stop.

YES

NO

NOT GIVEN

40. A well-designed platform can guarantee that the missing object will be found.

YES

NO

NOT GIVEN

Writing

IELTS Academic Practice Set 36 - Writing

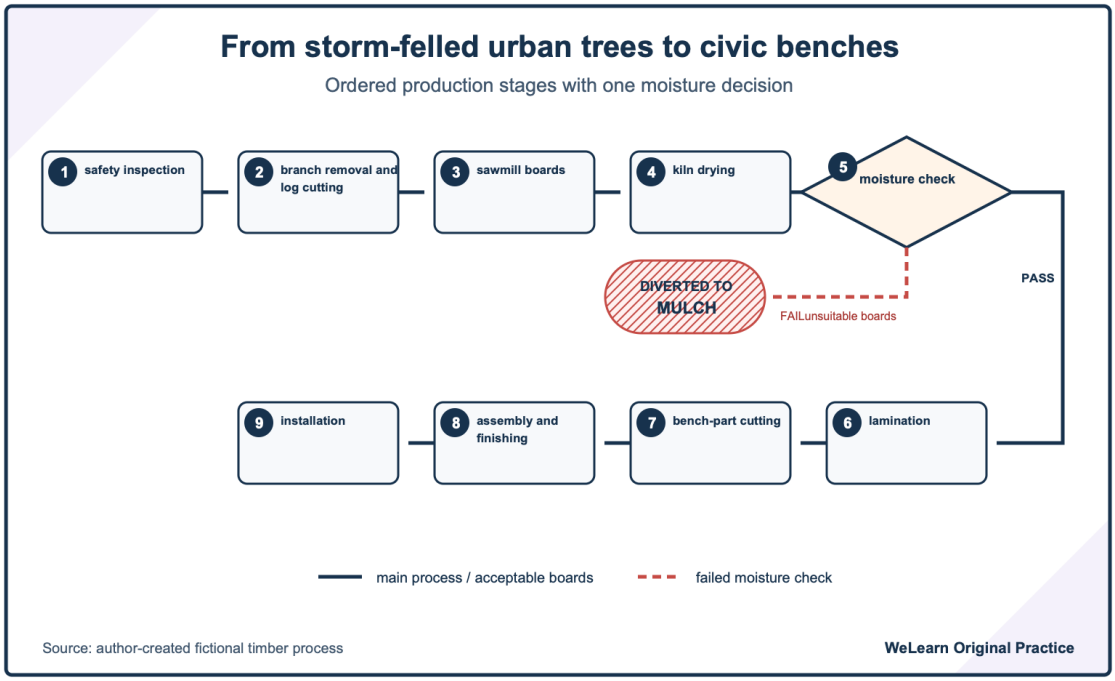

1

You should spend about 20 minutes on this task.

The diagram below shows how storm-felled urban trees are converted into civic benches.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.

2

You should spend about 40 minutes on this task.

Some people think that governments should offer financial rewards to encourage more people to donate blood.

To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

Speaking

IELTS Speaking Practice Set 36

Part 1

- Good morning. My name is the examiner for this unofficial practice attempt.
- What name would you like me to use?
- Thank you.

stickers

- Do you use or notice stickers very often?
- Why do people keep some stickers and remove others?
- Do you think stickers are mainly decorative or informative?
- Has the way you use stickers changed over time?

socks

- How do you choose socks for different situations?
- Which materials do you find most comfortable?
- Do you prefer socks that match your clothes or socks that are simply practical?
- Is there a particular pair of socks that you remember?

hand signals

- What hand signals do people commonly use where you live?
- In which situations are hand signals especially useful?
- Have you ever misunderstood someone’s gesture?
- Do you think hand signals mean the same thing in different cultures?

Part 2

Describe an object that you used in an unexpected way.

You should say:

- what the object was and its usual purpose
- what problem you were trying to solve
- how you used the object differently

and explain why this unexpected use was effective or memorable.

- Would you like to have a similar experience again?
- Do you think other people would feel the same way?

Part 3

flexible products and unintended uses

- Why do people adapt products for purposes their designers did not expect?

© 2026 Idiomas WeLearn. Todos los derechos reservados. · idiomaswl.com
Uso personal y educativo. Prohibida su reproducción, venta o distribución sin autorización escrita.

- How should designers balance flexibility with safety?
- How do useful inventions created by ordinary users spread to other people?
- Should companies actively learn from unexpected uses of their products?
- What questions of ownership or responsibility can arise from user-made adaptations?
- Will products become more adaptable in the future? Why or why not?
