01 Comprensión auditiva - Parte 1: Opción múltiple (fragmentos cortos)

Question one. You hear part of a radio program about people who can't hear musical beats. What does beat deafness mean? It's when people can't hear the beat in music. They can't move in time to even the strongest beat. I'm not saying they don't know what rhythm is though. I've seen those people in my exercise class when I do aerobics or whatever to music. They step to the left when everyone else is moving to the right. Well, it's possible that the people you're talking about just have a problem with learning a new routine at speed. It's pretty rare to find people who are genuinely beat deaf, though lots of people tend to think they are when actually they're just poor dancers. What does beat deafness mean? It's when people can't hear the beat in music. They can't move in time to even the strongest beat.

I'm not saying they don't know what rhythm is though. I've seen those people in my exercise class when I do aerobics or whatever to music. They step to the left when everyone else is moving to the right. Well, it's possible that the people you're talking about just have a problem with learning a new routine at speed. It's pretty rare to find people who are genuinely beat deaf, though lots of people tend to think they are when actually they're just poor dancers. So, we have to make a map of our local area for our next geography lesson. Where do we start? Our teacher told us to look at that online map making tool, but she didn't give too many details about it. Using it might be easier said than done, judging by how complex it looks.

Hmm, the teacher said it looked harder than it actually is to use, but I'm not convinced either. We need to become really familiar with the area before we start doing anything I'd say. Walking around and sketching stuff? I'd rather just get on with it. Okay, well, I'll meet you after class. So, we have to make a map of our local area for our next geography lesson. Where do we start? Our teacher told us to look at that online map making tool, but she didn't give too many details about it. Using it might be easier said than done, judging by how complex it looks. Hmm, the teacher said it looked harder than it actually is to use, but I'm not convinced either. We need to become really familiar with the area before we start doing anything I'd say. Walking around and sketching stuff? I'd rather just get on with it.

Okay, well, I'll meet you after class. Question 3 You hear two friends talking about a TV program they have seen. Did you see that program about new food technology? Yeah, those hollows are the ones that make you feel like you're in a new world. They look like real grains of salt, but aren't solid. Apparently, your mind gets tricked into thinking it's traditional salt, so you can eat more healthfully but don't notice the difference. I question whether it can really be as nice as the real thing, and it must be complicated to process. So, it's unlikely to make it into supermarkets anytime soon. It would be pretty expensive anyway. But it might be worth it for the sake of being healthier. Did you see that program about new food technology? Yeah, those hollow salt crystals they can make were amazing.

They look like real grains of salt, but aren't solid. Apparently, your mind gets tricked into thinking it's traditional salt, so you can eat more healthily. But it might be worth it for the sake of being healthier. Question 4. You hear a teacher telling her students about a historical novel. You hear a teacher telling her students about a historical novel. You hear a teacher telling her students about a historical novel. You hear a teacher telling her students about a historical novel. You hear a teacher telling her students about a historical novel. You hear a teacher telling her students about a historical novel. You hear a teacher telling her students about a historical novel.

I know you'd rather bury your heads in the latest popular novels than read anything that sounds a bit serious, but I must recommend Chore Town. It's not something I'd normally pick up in a bookshop, and I wouldn't have read it if someone hadn't passed it on to me. It's set 200 years ago and follows the story of a family living in a town in the city of Chore Town. I know you'd rather bury your heads in the latest popular novels than read anything that sounds a bit serious, but I must recommend Chore Town. It's not something I'd normally pick up in a bookshop, but I would recommend Chore Town. It's set 200 years ago and follows the story of a family living in a town in the city of Chore Town. It's set 200 years ago and follows the story of a family living in a town in the city of Chore Town.

It's set 200 years ago and follows the story of a family living in a town in the city of Chore Town. It's not something I'd normally pick up in a bookshop, and I wouldn't have read it if someone hadn't passed it on to me. It's set 200 years ago and follows the story of a family living in our town at that time. I won't spoil it by saying any more, but you'll love recognizing the places that are mentioned. Lots of things have changed since then, but the characters' lives are strikingly similar to our own. Question 5 You hear a man who is blind talking about experiencing travel through his sense of smell. I'm blind, so I rely on my other senses a lot, especially when I travel.

It's all very well asking your companions to describe a scene, but I was eager to find my own way of experiencing all the new places I visit, so I decided to focus on smelling them instead. It wasn't easy focusing my attention this way at first, but now I can recall a place instantly when I smell certain things. Sea Spray reminds me of South Africa, and Fresh Coffee of Columbia. I'm convinced this method makes my travel experiences more intense than if I could see where I was. I'm blind, so I rely on my other senses a lot, especially when I travel.

I'm blind, so I rely on my other senses a lot, but I'm not blind, so I rely on my other senses a lot, so today's session is about navigation, finding your way on the ocean.

This is a complex science and even highly experienced sailors who've spent years perfecting their navigation skills can still make errors of judgement. It boils down to just two things, knowing where you are and knowing how to get where you want to go. Safely. It's easy to spend enormous amounts of time poring over maps. This is better done before you set off than during the voyage. Keep concentrating on what's happening right now. That is the end of part one.

02 Comprensión auditiva - Parte 2: Completar oraciones

You will hear a man called James Perry talking about growing olives, a kind of fruit used to make oil for food. For questions 9 to 18, complete the sentences with a word or short phrase. You now have 45 seconds to look at part 2. Thanks for inviting me to talk to you about my experiences of olive farming. I'm aware you're thinking of doing this yourselves, so I'll tell you about the oil production process as I've experienced it this year for the first time. Growing the olives went pretty smoothly, but every crop farmer falls victim to the weather at some point. I'd been lucky to get away with a generally mild winter, and fortunately the farm wasn't damaged in the one violent storm there was. A sudden frost did claim a number of our trees, though, so their olives didn't mature.

I also found out that humans aren't the only creatures which like olives. There are a few insects, such as the olive fly, which can hang around the fruit. I wasn't bothered by them, but I was by a certain species of worm. Fortunately, these aren't harmful to the olives, though. I picked the olives, with help from my wife, in autumn, and it was as challenging as you'd expect. Some methods are more efficient than others. I was tempted to pick them by using an electric-powered tool. In the end, I opted to collect them by hand, in order to maintain quality, though they can also be collected by machine, the trees are shaken and the olives fall. Traditionally, olives are collected straight from the tree into a basket. This keeps them in the best condition, and they say it produces the best oil.

Not having any, I used a bucket instead, and hoped it wouldn't affect the olives too much. Once they were picked, the next step was cleaning the olives. I knew I'd have to select only the best ones for pressing-that's the process where they're squeezed to produce oil-any with bruises I threw on the fire, and picking out leaves was possibly the most uninteresting job I've ever done. I was glad I didn't need to take the olives' tones out as well. I remember standing there after I'd finished sorting the olives. It was as though the kitchen had turned into a kind of temporary factory. There were boxes and trays everywhere. Everything was covered in stains-not just the tables, but our clothes and skin, too. The next step was getting the olives to the busy press outside the village.

I'd booked the first time slot, so we loaded up at dawn. I arrived on time, and then, confusingly, had to sit in a line while trucks got waved in ahead of me. Whatever the system was, I clearly didn't understand it. After only half an hour the oil was bottled. The taste was disappointing, to say the least. Olive oil is often used to pour over salads, but you wouldn't have wanted to put my oil on anything. I knew it would be OK to use for cooking, and my wife laughingly said we'd be able to burn it in lamps. My first attempt at oil production had not been the great success I'd imagined. What had gone wrong? I concluded that it must have been choosing the wrong time to pick the olives. We say that fruit becomes ripe when it's ready to be picked, and this word is used to describe olives, too.

But many of the olives in our first batch had gone past that point. We'd been waiting for them to grow bigger, and so picked them too late. That's why there was so little flavour to my first oil. Hopefully next year I'll be much more successful. I'd like my oil to have that delicious pepper taste it should have. If that works, then the following year I might even try making some flavoured oils, chilli, garlic and herbs are great ingredients. I can't wait. Now, are there any questions? Now you will hear part two again. Thanks for inviting me to talk to you about my experiences of olive farming. I'm aware you're thinking of doing this yourselves, so I'll tell you about the oil production process as I've experienced it this year for the first time. Growing the olives went pretty smoothly, but every crop farmer falls victim to the weather at some point. If that works, then the following year, I might even try making some flavored oils, chili, garlic, and herbs are great ingredients. I can't wait. Now, are there any questions? That is the end of part two.

03 Comprensión auditiva - Parte 3: Emparejamiento múltiple

You will hear five short extracts in which people are talking about why they studied astronomy, the scientific study of stars and planets. For questions 19 to 23, choose from the list A to H the reason each speaker gives for choosing to study the subject. Use the letters only once. There are three extra letters which you do not need to use. You now have 30 seconds to look at part 3. When I was six, my granddad bought me a telescope. It was only a kid's one and wasn't particularly powerful, but it sparked my fascination with space. I'd spent hours gazing up at the dark night sky. As I grew up and became interested in other stuff, I forgot about the stars for a while, but when I did a postgraduate degree, I ended up doing astronomy so I could put my maths and physics degree to use in an interesting way.

My parents didn't think there'd be many well-paid job opportunities in the field, and they were right, but I only studied it because I liked it. Number 2 As a kid, I used to visit my dad at the observatory where he worked. I remember looking through fancy telescopes there. He was so enthusiastic about his work that he wanted me to follow in his footsteps. That was his dream. I wanted to be a racing driver. I only got as far as working as a mechanic on a team, though, which I didn't want to do forever. In order to get ahead, I knew I'd have to have a certificate or two. I turned to astronomy simply because I already knew so much about it. Dad still thinks I did it for him.

Speaker 3 My family moved around a lot when I was a child, and even when I felt a bit unsettled being in yet another country, the one thing I could rely on was the stars above me. They made me feel safe. So, from being a kid, studying astronomy was the only way forward for me. I can't imagine what I'd have done if I hadn't become an astronomer. I had to work pretty hard at the theoretical side of things. My knowledge of physics and maths was weak, but I was determined, and now I'm doing a job I love. Speaker 4 I didn't go to university straight after school. Instead, I worked for an organisation which developed computer software for interpreting satellite images. It was specialist work, and although I started off as the office junior, I picked up quite a lot of knowledge in a very specific field.

I did occasionally get to do a bit of practical stuff, which got me interested in astronomy. If I'm honest, I just wanted to play with the big new telescopes I knew were available to students at the university I chose to study at. I passed the course and now travel around the world making observations. Speaker 5 As a teenager, I wanted to travel all over the world studying volcanoes, something exciting that very few people knew about. That idea didn't last long as I realised it would be more satisfying to do what generations of my relatives had done before me and study the universe. Now I'm involved in theoretical astronomy, making observations and testing theories. It's as fascinating as I'd hoped, though the salary could be better. Maybe it will be when I make a major discovery about space.

Now you will hear part 3 again. Speaker 1 When I was 6, my grandad bought me a telescope. It was only a kid's one and wasn't particularly powerful, but it sparked my fascination with space. I'd spent hours gazing up at the dark night sky. 04 Comprensión auditiva - Parte 4: Opción múltiple (fragmento largo)

You will hear an interview with a life coach called Mel Candy who helps people to achieve a work-life balance. For questions 24-30 choose the best answer A, B or C. You now have 1 minute to look at part 4. Mel, you're a life coach which means you help people improve the way they live their lives. You specialise in achieving a work-life balance, don't you? Right. The most frequent complaint from clients is that they're too busy. Some high-powered managers love that and they're successful at making free time too. But for others, no matter what their position, it's a problem. They recognise there must be something they can do about it. That's why they approach me. I think they expect me to pick a number and say you should only be spending X number of hours at work, but it depends what's best for the individual. Do people who work from home find it more difficult to switch off? Definitely, especially those who live alone, because it's tempting to work late. For these people it's essential to get out and have some contact with others every day. The more time you spend on your own, the harder it becomes to hold a conversation when you do see someone. You can spend too much time inside your own head without realising it, and that isn't healthy. What's your opinion of multitasking? Trying to do more than one thing at a time. Sounds great, doesn't it? Saving time by making a business call while you're eating your lunch at your desk. I used to think I was really good at this, but when I read some groundbreaking research, I realised it was actually counterproductive.

My brain couldn't cope with constant switching between activities. It's better to do one task at a time. So what's the expert solution to achieving work-life balance? Work can become all important. I get clients to turn that around, let life become the important thing. I know you can't necessarily get worked on faster, but those who successfully achieve a work-life balance put family occasions and important dates in a diary and stick to them. That's where I come in, sitting down and getting people to consider not just what they've got to do today, but in the next few weeks or months. What do people find most difficult when they're trying to achieve a balance? Putting the fear of losing out to one side, thinking exciting things are happening and they aren't there to experience them.

And people feel guilty if they don't respond to an email straight away, even though people don't usually expect you to answer immediately. Have you picked up any good tips from clients? Yes, I have. I never used to leave the house if everything wasn't in its rightful place. Then a client I was helping told me she'd realised it wasn't a sign of failure if she left the house a little untidy when she went out to work. She said she'd rather spend her free time on the golf course than tidying up. I adopted her approach, and although I can't exactly advise other people not to do their cleaning, it saved me half an hour a day. How do you know when you've achieved a work-life balance? I feel energetic, and I want to get out there and do things, both personally and professionally.

I don't sit there at my desk wishing I was in front of the TV chilling out. As long as I don't feel overwhelmed by work and uncomfortable with the amount I have to do, that's balance for me. Thanks, Mel. Now you will hear part four again. Mel, you're a life coach, which means you help people improve the way they live their lives.
