01 Comprensión auditiva - Parte 1: Opción múltiple (fragmentos cortos)

Question one. You hear two people talking about their new boss. So, what do you think about our new boss then? Kelly. She seems alright. She didn't look as if she was enjoying it much though, did she? You have to love your work if you're going to do it well, don't you think? I don't think she wasn't enjoying it. I think she was just getting to grips with everything, you know? It isn't easy taking over a new team, and she did appear a bit shy, I suppose. I think that was it. We'll soon find out what she's really like, won't we? Yeah, we will. So, what do you think about our new boss then? Kelly. She seems alright. She didn't look as if she was enjoying it much though, did she? You have to love your work if you're going to do it well, don't you think? I don't think she wasn't enjoying it.

I think she was just getting to grips with everything, you know? It isn't easy taking over a new team, and she did appear a bit shy, I suppose. I think that was it. We'll soon find out what she's really like, won't we? Yeah, we will. Question two. You hear a young man talking about his sports studies course. Yes, I'm very pleased with the course. The teaching is excellent, as we'd been promised when I applied, and I've learnt so much. I still have two years to go. I'm pleased about that, because I'm enjoying it so much. I'm also aware that there's a lot more to cover. By the time we leave, we'll all have specialised in one or two sports, but we'll still officially be allowed to coach people in quite a range of others too.

I hadn't expected to see people on the course who weren't particularly sporty, but in fact, what we study really is appropriate for everybody. Yes, I'm very pleased with the course. The teaching is excellent, as we've been promised when I applied, and I've learnt so much. I still have two years to go. I'm pleased about that, because I'm enjoying it so much. I'm also aware that there's a lot more to cover. By the time we leave, we'll all have specialised in one or two sports, but we'll still officially be allowed to coach people in quite a range of others too. I hadn't expected to see people on the course who weren't particularly sporty, but in fact, what we study really is appropriate for everybody. Question three. You hear a woman talking about a trip to the theatre.

I've been looking forward to it for weeks. I love Shakespeare, you know, and this production had been given fantastic reviews. I thought I might regret going on this particular trip though, because the woman next to me coughed all the way there on the bus, poor thing, and I thought she'd be doing that all the way through the play, but she must have had some very good throat-sweets. I wish I'd found out what brand they were actually, because she never coughed once when we were in the theatre. I hope she was all right when she got home, because it was a rotten cold. I've been looking forward to it for weeks. I love Shakespeare, you know, and this production had been given fantastic reviews. I thought I might regret going on this particular trip though, because the woman next to me coughed all the way there on the bus, poor thing, and I thought she'd be doing that all the way

through the play, but she must have had some very good throat-sweets. I wish I'd found out what brand they were actually, because she never coughed once when we were in the theatre. I must say I hope she was all right when she got home, because it was a rotten cold. Question four. You hear a lecturer discussing a scientific experiment with a student. So, how do you think the experiment went? Have you got plenty of results to work on? Yes, but some of them were a bit surprising, so I think I'd better repeat it. Fair enough. In fact, that's exactly what I wanted to talk to you about.

It's a good idea to do that anyway, just to satisfy yourself that you've recorded everything properly. I think I have, but I'll have another go. It won't take long. Question five. You hear a lecturer discussing a scientific experiment with a student. I think I'll have another go. Question six. You hear a lecturer discussing a scientific experiment with a student. I think I'll have another go. Question seven. You hear a lecturer discussing a scientific experiment with a student. I think I'll have another go. I think I'll have another go. It won't take long. I think I'll have another go. It won't take long. I think I'll have another go. It won't take long. I think I'll have another go. It won't take long. I think I'll have another go. It won't take long. I think I'll have another go.

I think I'll have another go. Question eight. You hear a lecturer discussing a scientific experiment with a student. I think I'll have another go. It won't take long. I think I'll have another go. It won't take long. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. Question nine. You hear a lecturer discussing a scientific experiment with a student. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go.

I think I'll have another go. I think I'll have another go. I think I'll have another go. So, how was your geography trip then? Not too bad in the end, actually. I was happy to get home, but I also felt it had lived up to my expectations. Certainly as far as the coursework we covered was concerned. I really feel I know what I'm doing now. The weather was disappointing, but it didn't matter because they'd organised loads of things for us to do. And spending all that time with my classmates turned out to be a real bonus too. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go. I think I'll have another go.

It didn't matter because they'd organised loads of things for us to do. And spending all that time with my classmates turned out to be a real bonus too. I've made quite a few new friends. I needn't have worried about that side of things at all. This is a good exhibition, isn't it? It's great to see so much all in one place like this. And the reviews I read said there was a lot to take in, so I knew there'd be plenty to look at. And they were right about another thing too. What's that? There's a lot here that all sorts of people will enjoy, I think. This kind of thing is very fashionable at the moment. Yeah, I suppose you're right. I haven't seen anything like this myself though, so it's great to be able to come here and see what they mean. This is a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good

exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? Question 8 You hear a student talking about learning a new language. I didn't have to learn a new language, as well as everything else I have to do on my course, but I thought it would be worth it.

I'll definitely need it at some stage, so I might as well get on with it now. I'm enjoying the challenge, actually. I've always found languages fairly straightforward, but this is a bit more complicated, but I've always found languages fairly straightforward, so I might as well get on with it now. I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it?

I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it? I think it's a good exhibition, isn't it?

02 Comprensión auditiva - Parte 2: Completar oraciones

You will hear a man called Jim Green talking about how to get into the music industry. For questions 9 to 18, complete the sentences with a word or short phrase. You now have 45 seconds to look at part 2. Hello and thank you for inviting me to talk to you this evening about how to get into the music industry. So the first thing to note is that the music industry is constantly changing and evolving. You need to make sure you stay up to date and keep up with trends affecting the business. Check out specialist music websites for news and insight into the industry and also trade magazines, which are produced for industry insiders, unlike other music magazines.

Obviously you'll need a CV when you apply, whether it's for an unpaid internship or for a paid job, and you need it to make an instant impression if you want to have a chance of getting an interview. It doesn't have to be very long, but it really does need to be memorable. As you know, there's a huge amount of competition for places. The person looking at your CV needs to see that you are enthusiastic and can use your own initiative. Unpaid interns are often expected to do administrative work, so if you have any experience in that area, do include it. You are unlikely to be involved in PR work or dealing directly with the stars. Lots of people who are now high up in the industry did low-paid jobs when they first started. You might be surprised to know that one top executive started out as an office cleaner.

My first job was as what's known as a T-boy, and I'm happy with the way my career has progressed. I'm glad I didn't turn the first work offer down. It was a great way to get in. So, I suppose my main piece of advice to anyone considering applying for an internship is, don't limit yourself. People need to remind themselves that life is full of surprises and unexpected developments. You just never know what something relatively unexciting may lead to. And if you have any experience at all in the music industry itself, that will help too. I'd worked as a volunteer before applying for paid work. I'd spent three summers helping out at music festivals, and what started off as a desire to have a bit of fun turned into a passion for me. So, I'd definitely recommend volunteering. All experience is useful.

But having this kind of experience on your CV shows that you don't just know about theoretical aspects of the industry, but practical ones too. You should also try to meet people who work in the music business. Go to as many different networking events as possible, check industry websites to find out about these, and there are also plenty of experts giving talks that you'll find useful. Conferences are also worth going to if you can, because you'll meet all sorts of helpful people there. One big music organization also holds a series of informal music career talks in different parts of the country. You can meet people doing things from marketing to digital music production, a reminder that there are more roles in the music industry than just being a singer.

If you're interested, come and see me after the talk, and I'll give you the details. Finally, don't forget that like all other businesses, creative industries like the music industry also need lawyers and accountants, and people to do all those other backroom jobs. So, if you're already training for or doing a job like that, it could be a great way of combining a love of music with your chosen profession. Now you will hear part two again. Hello, and thank you for inviting me to talk to you this evening about how to get into the music industry. So, the first thing to note is that the music industry

is constantly changing and evolving. You need to make sure you stay up to date and keep up with trends affecting the business.

Check out specialist music websites for news and insight into the industry, and also trade magazines, which are produced for industry insiders, unlike other music magazines. Obviously, you'll need a CV when you apply, whether it's for an unpaid internship or for a paid job, and you need it to make an instant impression if you want to have a chance of getting an interview. So if you're already training for or doing a job like that, it could be a great way of combining a love of music with your chosen profession.

03 Comprensión auditiva - Parte 3: Emparejamiento múltiple

You will hear 5 short extracts in which people are talking about listening to music. For questions 19-23 choose from the list A to H what each speaker says about listening to music. Use the letters only once. There are 3 extra letters which you do not need to use. You now have 30 seconds to look at part 3. I always loved music as a child. I can remember singing and playing the piano with my mother. She was a musician, very talented and incredibly energetic. One of the many things she did while we were growing up was to make sure that all her children learned to play an instrument. I didn't inherit her talent as a player unfortunately, but as a music critic I get to a teacher who doesn't know how to play. I have to attend some of the best classical concerts in the world.

Funnily enough I rarely listen to music in my spare time these days. I find silence more relaxing. I have a very busy job in the music industry. I don't actually ever have to listen to music as part of my job because I work in the accounts department. But I do listen to it a lot in my spare time. Apart from the fact that I love it, especially jazz and blues, it really helps me forget about all the stress at work. In the office where I'm surrounded by people I have to be extremely focused and I wouldn't have the energy to carry on sometimes if I didn't have a way of getting away from it all from time to time. Speaker 3 I work in a busy office. I've discovered that the best way to block out the noise around me and get on with what I'm supposed to be doing is to put on a pair of headphones and play some music.

Classical works best, although I enjoy rock and folk too. Of course if I want to chat to other people, my work colleagues I mean, then the headphones come off and I end up shouting to make myself heard like the rest of them. Those breaks with other people do mean that I usually return to my work feeling more relaxed and inspired. Speaker 4 I can't imagine my life without music. It's just always been there in the background for as long as I can remember. I wouldn't say I really focus on it that often, but I do listen and when I go out running with music on, the run often feels as if it's over before it's even started. I think lots of other people are the same. They might not sit down and listen to it carefully, but they do enjoy it. I miss it when it isn't there.

I have my favourites of course, but everything's on my player and I just have it on shuffle. Speaker 5 I'm quite fussy about what I listen to I suppose. When I'm feeling energetic, I play something with a faster beat and when I'm feeling more chilled then I like to have something quieter on. The music is vital for me when I'm painting, which is my hobby. Somehow new ideas seem to come to me more easily when I'm listening to music. It's always been that way for me. I know a lot of other people say the same thing too. I suppose music has always been important for human beings in all kinds of different ways. Now you will hear part 3 again. Speaker 1 I always loved music as a child. I can remember singing and playing the piano with my mother. She was a musician, very talented and incredibly energetic.

One of the many things she did while we were growing up was to make sure that all her children learned to play an instrument. I didn't inherit her talent as a player unfortunately, but as a music critic I get to attend, in fact I have to attend, some of the best classical concerts in the world. Funnily enough, I rarely listen to music in my spare time these days. I find silence more relaxing. Speaker 2 I

have a very busy job in the music industry. I don't actually ever have to listen to music as part of my job because I work in the accounts department, but I do listen to it a lot in my spare time. Apart from the fact that I love it, especially jazz and blues, it really helps me forget about all the stress at work.

In the office where I'm surrounded by people I have to be extremely focused, and I wouldn't have the energy to carry on sometimes if I didn't have a way of getting away from it all from time to time. Somehow, new ideas seem to come to me more easily when I'm listening to music. It's always been that way for me. I know a lot of other people say the same thing too. I suppose music has always been important for human beings, in all kinds of different ways. That is the end of part 3.

04 Comprensión auditiva - Parte 4: Opción múltiple (fragmento largo)

You will hear an interview with a biology student called Gail Koch who is spending a year in the rainforest working as a field scientist. For questions 24 to 30 choose the best answer A, B or C. You now have one minute to look at part 4. You can find the answer in the description below. You can also find the answer in the description below. You can also find the answer in the description below. You can also find the answer in the description below. You can also find the answer in the description below. You can also find the answer in the description below. I'm delighted to be interviewing Gail Koch, a biology student via satellite link to the rainforest in South America. Hello Gail. Hi. So after nearly a year studying in the rainforest, what's it like being a field scientist?

Well people often imagine scientists being in laboratories wearing white coats, but they don't all work that way. Field scientists work outside, exploring and investigating, then trying to understand what they observe. That's what I'm doing here, though I wouldn't say I'm a real one yet, even though I've been out here for almost a year. But although I still lack experience and have a lot to learn, I hope my enthusiasm more than makes up for that. And what do you enjoy most about living out there? I'm living in a typical tropical rainforest at a small scientific research station. It's very hot and humid, the trees grow tall and very close together, and it's absolutely full of life, both plants and animals.

But at the end of the day, before it gets dark, it finally cools down a little and the trees look stunning in the light of the setting sun. That's what I'll really miss when I have to go home. And what does your research involve? I'm studying lizards, trying to find out exactly which species are here. I explore the area around the research station, helped by a local guide or I'd soon get lost. It's incredibly exciting when I actually see a lizard. I have to catch it of course and then check whether or not I've already found an example of this particular species. I spend most of the time though walking extremely slowly and all I can see are leaves. That's very much what it's like for most field researchers. So what inspires you most about your work? It's demanding and often repetitive, but it's rewarding too.

It's not that I want to be the first person ever to discover a new species or gain academic glory, though of course I'd like that. But that I could really add to what scientists know about the world. That's what motivates me. That's wonderful. How easy is it to become a field scientist? It's quite a hard world to break into because so many people want to do it, even though it's poorly paid compared to many other graduate jobs. In many cases you have to work for no salary at the beginning of your career and even pay your own expenses. That's tough when there seem to be endless opportunities for science graduates in other careers. So would you recommend working at this research station to other biology students? Yes, absolutely.

I could be an assistant in a lab going through endless pages of numbers and results day after day, but luckily I'm here. And I'm sure the countless skills I've learned over the past year will be an advantage when I apply to do further study. I can choose my own research and it's entirely up to me how I organise my day. That all sounds very positive. There must be some disadvantages to being there though. Well, sometimes I've got no idea what I'm supposed to do next or how to do

something and it can be hard to get myself organised. I had all sorts of plans to improve my little living space when I arrived, but somehow I've never got round to it.

Also, the technology I use here is fairly basic and there is always the possibility that I'm missing out on the latest advances in zoology while I'm here, but I personally wouldn't be anywhere else for the world. Now you will hear part 4 again. I'm delighted to be interviewing Gail Koch, a biology student via satellite link to the rainforest in South America. Hello Gail. Hi. So, after nearly a year studying in the rainforest, what's it like being a field scientist? Well, people often imagine scientists being in laboratories wearing white coats, but they don't all work that way.
