Comprensión auditiva - Módulo 1 - Elegir una respuesta

01 Elegir una respuesta 1

Excuse me, could you tell me where the ticket office is?

02 Elegir una respuesta 2

Could you help me study for the test tonight?

03 Elegir una respuesta 3

Do you know when the next train leaves?

04 Elegir una respuesta 4

Do you mind if I keep this book a little longer?

05 Elegir una respuesta 5

How did your presentation go today?

06 Elegir una respuesta 6

Where did you leave the laboratory manual?

07 Elegir una respuesta 7

I am afraid the afternoon tour is already full.

08 Elegir una respuesta 8

Did you submit the travel reimbursement form?

Comprensión auditiva - Módulo 1 - Audios extensos

09 Comprensión auditiva - Conversación

Woman: Are you going to the study-skills workshop this afternoon?

Man: I wasn't planning to. Do you think it's worth it? I've got a lot of reading to catch up on.

Woman: Honestly, I think it might be. It's on note-taking and time management. And you're always saying you feel behind and disorganized.

Man: That's true. My notes are a mess - I write down everything the professor says, and then I can't find anything useful later.

Woman: See, that's exactly what they'll cover. Apparently there's a method where you only write key points during the lecture and then summarize in your own words afterward. Supposedly you remember much more that way.

Man: Huh. That actually sounds like it could fix my problem. But it's from three to four, and I have so much reading.

Woman: One hour now could save you hours later, though. If you take better notes, you won't have to reread everything three times.

Man: Okay, you've convinced me. I'll come. If nothing else, it'll stop me from feeling guilty about procrastinating on the reading.

10 Comprensión auditiva - Anuncio

Good afternoon, students. This is a reminder from the Registrar's Office about course registration for the spring semester. Registration opens next Monday at eight a.m. and will be done entirely online through the student portal. A few important points. First, check your registration time - it's based on the number of credits you've completed, and students with more credits register earlier. You can find your assigned time slot on your portal dashboard.

Second, before you can register, you must clear any holds on your account, such as unpaid library fines or an incomplete health form. Holds will prevent you from registering, so resolve them this week. Finally, popular courses fill quickly, so we strongly recommend logging in right at your assigned time and having a backup plan in case a class is full. If you have questions, our staff are

available at the Registrar's Office all week. Thank you.

11 Comprensión auditiva - Charla académica

Professor: I want to talk about a bird that has fascinated scientists for over a century: the Arctic tern. What makes it remarkable is its migration. Every year, the Arctic tern travels from its breeding grounds in the Arctic all the way to the Antarctic and back. That's a round trip of roughly seventy thousand kilometers. Over a lifetime, which can be thirty years, a single tern may fly a distance equal to going to the moon and back several times. Now, why would a small bird undertake such an exhausting journey? The answer is elegant: by traveling between the two poles, the Arctic tern experiences two summers each year. It's always heading toward a region where days are long and food is abundant. So even though the journey is enormous, the payoff is nearly continuous access to rich feeding grounds and long daylight hours for catching fish. The obvious question is: how does it navigate? A bird crossing entire oceans with no landmarks needs a reliable sense of direction. Research suggests terns use a combination of cues. They can sense the position of the sun and stars, and remarkably, they appear to detect the Earth's magnetic field, using it like a built-in compass. Some studies suggest young birds inherit a rough migratory program and then refine it through experience over successive journeys. What I find most striking is the efficiency. The tern doesn't fly in a straight line - that would mean battling headwinds.

Instead, satellite tracking has shown that terns follow a winding route that takes advantage of prevailing wind patterns, adding distance but saving energy overall. It's a beautiful example of how evolution can produce behavior that looks almost like careful planning, even though no individual bird is consciously calculating anything.

Comprensión auditiva - Módulo 2 - Elegir una respuesta

12 Elegir una respuesta 1

Who can unlock the equipment cabinet?

13 Elegir una respuesta 2

I thought the guest lecture started at four.

14 Elegir una respuesta 3

Would you like me to print another copy?

15 Elegir una respuesta 4

Why are the windows covered with paper?

16 Elegir una respuesta 5

The coffee machine is not accepting my card.

17 Elegir una respuesta 6

How soon can you review the revised budget?

18 Elegir una respuesta 7

I may have taken the wrong bus downtown.

19 Elegir una respuesta 8

Could we use a quieter room for the interview?

Comprensión auditiva - Módulo 2 - Audios extensos

20 Corrección de un nombre en un certificado

Student: My volunteer certificate arrived, but my family name is missing a letter. I need the certificate for an internship application.

Coordinator: I can correct the record today. Please show me identification with the full spelling.

Student: Will I have to wait for another paper copy?

Coordinator: The printed copy takes about a week, but I can email a verified digital certificate by tomorrow afternoon. The internship office accepts that version, and you may collect the replacement paper copy later.

21 Orientación del archivo histórico

Announcer: Students registered for Friday’s archive orientation should meet in the history library at ten a.m. Bring a pencil rather than a pen because ink is not permitted near original documents. Bags and drinks must remain in the lockers outside the reading room. The session includes a short handling demonstration, so late arrivals cannot enter after ten fifteen.

22 Transpiración vegetal

Professor: Plants absorb liquid water through their roots, but much of that water eventually leaves as vapor through tiny openings in the leaves called stomata. This release is transpiration. Evaporation from soil and water surfaces plus plant transpiration are often discussed together as evapotranspiration, an important movement of water back to the atmosphere. Transpiration is connected to transport inside the plant. As water evaporates from leaf surfaces, it helps maintain a pull through water-conducting tissue from roots toward leaves. Water carries dissolved minerals and supports photosynthesis and other processes. Losing water, however, creates a tradeoff. Stomata also provide a route for carbon dioxide to enter a leaf, so closing them can conserve water but may limit carbon uptake. The rate is not fixed. Sunlight, temperature, humidity, wind, soil moisture, leaf structure, and plant species all matter. Hot, dry, windy air can increase the demand for evaporation, while a plant experiencing water shortage may reduce stomatal opening. Measuring water loss from vegetation therefore requires both biological and weather information. The main idea is not that plants passively leak a constant amount, but that water movement through leaves links plant function to the larger water cycle and changes with environmental conditions.

Expresión oral - Escuchar y repetir

23 Repetición 1

The shop is closed today.

24 Repetición 2

We watched a documentary about the ocean.

25 Repetición 3

The teacher asked the students to work in small groups.

26 Repetición 4

The city council approved a plan to build more bicycle lanes downtown.

27 Repetición 5

Because the flight had been delayed, the passengers were offered vouchers for a free meal.

28 Repetición 6

The environmental club organizes monthly cleanups along the river and welcomes volunteers from every department.

29 Repetición 7

After the guest speaker finishes the presentation, audience members will have fifteen minutes to ask questions about the research.

Expresión oral - Entrevista

30 Entrevista 1

Let's begin. Tell me about a subject you enjoyed studying in school. What was it, and why did you like it?

31 Entrevista 2

Some people prefer to save their money, while others prefer to spend it on experiences. Which are you, and why? Give reasons and an example.

32 Entrevista 3

Your town can build either a new sports stadium or a new hospital. Which would you recommend, and why? Explain how it would benefit the community.

33 Entrevista 4

Finally, make a prediction: how might education change over the next twenty years because of technology? Explain your reasoning.
