Comprensión auditiva - Módulo 1 - Elegir una respuesta

01 Elegir una respuesta 1

Excuse me, do you know where the bookstore is?

02 Elegir una respuesta 2

My phone is almost dead. Do you have a charger I could borrow?

03 Elegir una respuesta 3

When is the deadline to sign up for the course?

04 Elegir una respuesta 4

I'm running about 10 minutes late. Could you wait for me?

05 Elegir una respuesta 5

You look so happy! Did you hear back about your application?

06 Elegir una respuesta 6

When should the borrowed microphone be returned?

07 Elegir una respuesta 7

I am having trouble opening the shared document.

08 Elegir una respuesta 8

Would you like to join us for lunch after class?

Comprensión auditiva - Módulo 1 - Audios extensos

09 Comprensión auditiva - Conversación

Student: Professor Alvarez, I wanted to ask about the essay topic. You gave us a list, but I was wondering if I could write about something not on it.

Professor: That depends. What did you have in mind?

Student: I'm really interested in how music affects memory. I read an article about it and I'd love to explore it more.

Professor: That's a fascinating topic. It's certainly relevant to the course, since we've been discussing how the brain processes information. I'm happy for you to pursue it - but with one condition.

Student: Of course. What's that?

Professor: I want you to base your argument on research studies, not just the popular article. It's easy to find dramatic claims about music and the brain online, but many aren't well supported. Find at least three peer-reviewed studies and build your essay around what the evidence actually shows.

Student: That makes sense. I don't really know how to find peer-reviewed studies, though.

Professor: Start with the library's databases - not a general search engine. If you go to the library's website and look under "academic databases," you can search for scholarly articles. And if you get stuck, the research librarians are excellent at helping with exactly this.

Student: Great, I'll do that. Thank you for letting me choose my own topic.

Professor: My pleasure. Email me your three sources once you've found them, and I'll let you know if you're on the right track.

10 Comprensión auditiva - Anuncio

Good morning, everyone. This is an announcement about the campus health center. Starting next week, the health center will offer free flu vaccinations to all students and staff. The vaccine is strongly recommended, especially as we head into the colder months when flu spreads more easily. No appointment is needed - simply walk in during opening hours, which are nine a.m. to five p.m., Monday through Friday. Please bring your student or staff ID card.

The vaccination takes only a few minutes, and you can return to your day immediately afterward. If you have a medical condition or any concerns about the vaccine, please speak to one of our nurses first; they'll be glad to answer your questions. Protecting yourself also helps protect those around you, including classmates and family members who may be more vulnerable. Thank you.

11 Comprensión auditiva - Charla académica

> Professor: Today I want to talk about one of the most counterintuitive and powerful ideas in economics and biology alike: the tragedy of the commons. It describes what happens when many individuals, each acting in their own rational self-interest, end up destroying a shared resource that they all depend on. The classic example, from which the idea gets its name, is a shared pasture - a "commons" - open to all the herders in a village. Each herder benefits from adding more of their own animals to graze. From any single herder's point of view, adding one more cow is clearly worthwhile: they get all the benefit of that extra cow, while the cost - a little more wear on the shared pasture - is spread across everyone. So every rational herder keeps adding animals. But if all of them follow this same logic, the pasture is overgrazed and destroyed, and everyone loses. The tragedy is that individually rational choices lead to a collectively disastrous outcome. This pattern appears far beyond pastures. Overfishing is a textbook case: each fishing boat has an incentive to catch as much as possible, but if all boats do so, the fish stock collapses and no one can fish. The same logic applies to air pollution, traffic congestion, and the overuse of shared water supplies. In each case, the benefits of overuse are private, while the costs are shared - a recipe for depletion. So what can be done? Scholars have identified several solutions. One is regulation: a government sets and enforces limits, such as fishing quotas.

Another

Is

> Privatization: dividing the shared resource so that each owner bears the full cost of overusing their portion. But there's a third solution that the political scientist Elinor Ostrom demonstrated, winning a Nobel Prize for it. She showed that communities can, and often do, manage shared resources sustainably on their own - by creating their own rules, monitoring each other, and building trust. The tragedy, in other words, is not inevitable. It's a risk we can avoid through cooperation and good institutions.

Comprensión auditiva - Módulo 2 - Elegir una respuesta

12 Elegir una respuesta 1

Who is organizing the neighborhood clean-up?

13 Elegir una respuesta 2

This graph is difficult to read on the projector.

14 Elegir una respuesta 3

Did you remember to cancel the original reservation?

15 Elegir una respuesta 4

Where can I charge my phone in this building?

16 Elegir una respuesta 5

Why is the rehearsal ending early today?

17 Elegir una respuesta 6

I think the package was delivered to the wrong office.

18 Elegir una respuesta 7

Could you explain how to reserve a practice booth?

19 Elegir una respuesta 8

How was the train ride from the coast?

Comprensión auditiva - Módulo 2 - Audios extensos

20 Préstamo de equipo para trabajo de campo

Student: I need a soil moisture sensor for Saturday's field trip, but the equipment page shows none available.

Technician: One kit is reserved for a class that may be cancelled because of weather. I cannot release it yet.

Student: Is there another way to collect the measurement?

Technician: You can borrow two manual probes today. They take longer to read but provide the same type of measurement. If the electronic kit becomes free Friday morning, I will email you and exchange it before the center closes.

21 Renovación de la cafetería y punto de atención

Announcer: The ground-floor café will close after lunch today and remain closed for renovation until September. During the work, coffee, sandwiches, and meal-plan purchases will be available from a temporary counter in the east lobby on weekdays from eight until four. The counter will not accept cash. The nearest evening food service is in North Hall, which remains open until nine.

22 Medición del balance de masa de los glaciares

Professor: A glacier gains mass through snowfall and loses it through melting, sublimation, and breaking ice. The difference over a period is its mass balance. A positive balance means the glacier gained more ice than it lost; a negative balance means a net loss. One year alone does not define a trend. Researchers measure mass balance in several ways. Stakes placed in the ice reveal surface lowering or accumulation at specific locations. Snow pits help estimate how much snow accumulated and how dense it is. Because a few field points cannot describe every part of a large glacier, scientists combine them with aerial or satellite measurements of elevation, area, and gravity-related mass change. Each method has different spatial coverage and uncertainty. Losing grounded glacier ice adds water to the ocean and contributes to sea-level rise. Floating ice already displaces water, so its direct effect differs, although ice shelves can restrain grounded ice behind them. Glacier retreat also changes seasonal water supply in some regions. Scientists therefore distinguish mass from length: a glacier front can advance because ice flows forward even while the glacier has a negative mass balance. Reliable assessment uses repeated measurements and multiple lines of evidence.

Expresión oral - Escuchar y repetir

23 Repetición 1

The market opens early.

24 Repetición 2

He borrowed a book and read it in one evening.

25 Repetición 3

The company decided to open a new office in the capital.

26 Repetición 4

The teacher explained that the assignment would be due at the end of the month.

27 Repetición 5

Because the road was closed for repairs, the drivers had to take a much longer route home.

28 Repetición 6

The computer lab installed new software that students can use for data analysis and graphic design.

29 Repetición 7

Although the assignment is due next week, the professor recommends starting early because the final section requires careful comparison of several sources.

Expresión oral - Entrevista

30 Entrevista 1

To begin, describe something you have made or created that you are proud of. What was it, and why are you proud of it?

31 Entrevista 2

Some people prefer to make plans with friends in advance, while others prefer to be spontaneous. Which do you prefer, and why? Give reasons and an example.

32 Entrevista 3

Your town can spend money to either improve public transport or build more parking spaces. Which would you recommend, and why? Explain how it would benefit residents.

33 Entrevista 4

Finally, make a prediction: how might the jobs people do change over the next twenty years because of automation? Explain your reasoning.
