Comprensión auditiva - Módulo 1 - Elegir una respuesta

01 Elegir una respuesta 1

Excuse me, could you tell me where the campus bookstore is?

02 Elegir una respuesta 2

Can we get together to study for the exam later today?

03 Elegir una respuesta 3

Where can I get the registration form for the trip?

04 Elegir una respuesta 4

Could you share the presentation slides with the rest of the group?

05 Elegir una respuesta 5

You look thrilled today. Did something wonderful happen over the weekend?

06 Elegir una respuesta 6

Why did the editor return your article?

07 Elegir una respuesta 7

Could we sit somewhere closer to the stage?

08 Elegir una respuesta 8

I thought Marina was bringing the survey materials.

Comprensión auditiva - Módulo 1 - Audios extensos

09 Comprensión auditiva - Conversación

Man: Did you sign up for the volunteer tutoring program? The one where we help local high-school students with math and science.

Woman: I saw the poster but I wasn't sure. I want to, but I'm worried I'm not qualified. I'm only a second-year student myself.

Man: That's exactly what I thought at first. But they said you don't need to be an expert - you just need to be a year or two ahead of the students, which we definitely are. And there's a short training session before you start.

Woman: Oh, that's reassuring. What's the time commitment?

Man: Two hours a week, on a day that fits your schedule. You meet the same student each week, so you build a relationship and can really track their progress.

Woman: I like that. I think I'd find it rewarding, actually. Helping someone understand something you once struggled with yourself.

Man: Exactly. And honestly, it helps you too. Explaining a concept to someone else is one of the best ways to make sure you really understand it. I've heard people say they got better grades in their own courses after tutoring.

Woman: That's a good point. Okay, I'm convinced. Where do I sign up?

Man: There's a link on the student services page. The deadline is Friday, so don't leave it too long.

10 Comprensión auditiva - Anuncio

Good morning. This is an announcement for all students living in university housing. Next Tuesday, the water supply to buildings A, B, and C will be switched off temporarily for essential maintenance to the pipes. The shut-off will last from nine a.m. until approximately two p.m. During this time, there will be no running water in these buildings - no showers, no toilets, and no drinking water from the taps.

We strongly recommend filling a few bottles of water the night before, and planning to shower earlier in the morning or later in the afternoon. Temporary toilets will be available in the courtyard between buildings B and C. We understand this is inconvenient, and we've scheduled it for the middle of the day to affect as few people as possible. Buildings D and E are not affected. Thank you for your cooperation.

11 Comprensión auditiva - Charla académica

Professor: Today I want to talk about a surprising discovery in plant science: the ways in which trees communicate and cooperate with one another. For a long time, we pictured a forest as a collection of individual trees, each competing with its neighbors for sunlight, water, and nutrients. That picture isn't wrong, but it's incomplete. Beneath the forest floor, something remarkable is going on. The key players are fungi. The roots of most trees are connected to networks of fungthreads in the soil, in a partnership called a mycorrhiza. The fungi help the tree absorb water and nutrients from the soil, and in return, the tree gives the fungi sugars it makes through photosynthesis. But here's the fascinating part: because these fungal networks connect the roots of many different trees, they can act as a kind of underground channel linking the whole forest. Some scientists have nicknamed this the "wood wide web." Experiments using tiny amounts of harmless radioactive tracers have shown that trees can actually transfer carbon and nutrients to one another through this network. In some cases, a large, well-established tree will send resources to smaller, shaded seedlings nearby - often its own offspring. There's even evidence that when a tree is dying, it may release its stored resources into the network, effectively passing them on to its neighbors. Now, I want to add a note of caution here, because this area is exciting but also debated.

Some researchers argue that the popular image of trees "talking" and "sharing" out of cooperation may overstate what the evidence shows - the fungi, after all, may be moving resources for their own benefit, not the trees'. So while the underground networks are real and important, we should be careful not to romanticize them. What's certain is this: a forest is not simply a crowd of isolated competitors. It's an interconnected system, and understanding those connections is changing how we think about ecology and forest conservation.

Comprensión auditiva - Módulo 2 - Elegir una respuesta

12 Elegir una respuesta 1

How often is the campus newsletter published?

13 Elegir una respuesta 2

The workshop room does not have enough chairs.

14 Elegir una respuesta 3

Where did you upload the revised photograph?

15 Elegir una respuesta 4

Would Friday afternoon be too late for your response?

16 Elegir una respuesta 5

I cannot decide between the morning and evening sections.

17 Elegir una respuesta 6

Who can help me replace a lost transit pass?

18 Elegir una respuesta 7

Did you notice that the room number changed?

19 Elegir una respuesta 8

The printer produced another blank page.

Comprensión auditiva - Módulo 2 - Audios extensos

20 Solicitud de un certificado de notas para una postulación

Student: My graduate application requires an official transcript, and the deadline is next Monday. Can I collect one today?

Registrar: Official transcripts are sent electronically or by sealed mail; we do not print them at this desk. Electronic delivery usually takes one business day.

Student: The application portal asks for a document now.

Registrar: Upload the unofficial copy from your student account for the initial review, then order the official version directly to the university. Confirm that institution's address before paying, because an official order cannot be redirected after processing begins.

21 Cierre de la pista cubierta

Announcer: The indoor running track will close from noon Thursday until eight a.m. Saturday while crews replace damaged flooring. The fitness room and swimming pool will remain open. Track reservations during the closure have been cancelled automatically, and users will receive account credits. Friday's running club will meet outside at the south entrance if weather permits; a cancellation notice will be posted by four p.m. Thursday.

22 Cómo utilizan los murciélagos la ecolocalización

Professor: Many bats navigate and hunt by producing high-frequency calls and listening for echoes. Much of this sound is ultrasonic, above human hearing. The delay between a call and its echo provides information about distance. Differences in intensity, timing at the two ears, and spectral structure can indicate direction, size, surface, or motion. Calls are not all identical. A bat searching open space may use signals suited to detecting objects at a distance. As it approaches an insect, it often sends calls more rapidly, producing a feeding buzz that updates the target's location quickly. Species and environments differ, so one call pattern should not be treated as universal. Echolocation also has constraints. Producing calls uses energy, echoes can overlap with other bats, and vegetation creates complex reflections. Some prey hear bat calls and may take evasive action. Bats are not blind; many also use vision, smell, memory, and other cues. Scientists record calls with specialized microphones and display them as spectrograms. Recordings can help identify activity or sometimes species, but call overlap and variation require care. Echolocation is a flexible sensory system, not a simple replacement for eyesight.

Expresión oral - Escuchar y repetir

23 Repetición 1

The cafe is around the corner.

24 Repetición 2

She wrote a letter and posted it the next day.

25 Repetición 3

The museum offered free entry to students on weekdays.

26 Repetición 4

The report recommended that the school should reduce the size of its classes.

27 Repetición 5

Although the experiment failed the first time, the researchers learned enough to succeed on their second attempt.

28 Repetición 6

The music building has practice rooms available to students on a first-come, first-served basis.

29 Repetición 7

Participants in the volunteer program will receive safety training before they begin working with children at the community center.

Expresión oral - Entrevista

30 Entrevista 1

To begin, describe a hobby you would like to try in the future. What is it, and why does it appeal to you?

31 Entrevista 2

Some people prefer to spend their holidays relaxing, while others prefer to be active and explore. Which do you prefer, and why? Give reasons and an example.

32 Entrevista 3

Your university can spend money on either free online learning resources or more in-person tutoring. Which would you recommend, and why? Explain how it would benefit students.

33 Entrevista 4

Finally, make a prediction: how might the way people pay for goods change over the next twenty years? Explain your reasoning.
