TOEFL iBT 2026 · Set 3

Comprensión auditiva - Módulo 1 - Elegir una respuesta

01 Elegir una respuesta 1

Excuse me, do you know where the post office is?

02 Elegir una respuesta 2

I'm going to be away tomorrow. Could you save me a copy of the handout?

03 Elegir una respuesta 3

Where can I find out what time the buses run?

04 Elegir una respuesta 4

I forgot my textbook. Can I borrow yours for today?

05 Elegir una respuesta 5

You look really happy. Did something good happen?

06 Elegir una respuesta 6

I wish the café had more tables near the windows.

07 Elegir una respuesta 7

When are you planning to submit the application?

08 Elegir una respuesta 8

Could I borrow your notes from Monday?

Comprensión auditiva - Módulo 1 - Audios extensos

09 Comprensión auditiva - Conversación

Woman: Are you going to apply for the summer research assistant position in the chemistry department?

Man: I saw it, but I'm not sure I'm qualified. It says they want someone with lab experience, and I've only done the standard course labs.

Woman: Honestly, I think you should apply anyway. "Preferred experience" isn't the same as "required." And you did really well in organic chemistry last year - that counts for a lot.

Man: That's true. But there are probably lots of applicants who are further along than me.

Woman: Maybe, but you won't know unless you try. The worst that happens is they say no, and you're no worse off than you are now. Besides, even writing the application is good practice, and it puts you on the professor's radar for next year.

Man: I hadn't thought of it that way. What do you think they're really looking for?

Woman: From what I've heard, they care more about enthusiasm and reliability than about how much you already know. They'll train you on the specific techniques. So in your application, I'd focus on why you're genuinely interested and give examples of being careful and dependable.

Man: That's really helpful. Okay, I'll apply. Would you mind reading my application before I submit it?

Woman: Of course. Send it over when it's ready and I'll give you some feedback.

10 Comprensión auditiva - Anuncio

Attention, please. This is an announcement for all users of the university computer labs. Over the next two weeks, we will be upgrading the software on all lab computers to the latest versions, which will improve performance and security. The upgrades will happen overnight, so the labs will be fully available during the day as usual. However, there are two things to be aware of. First, please save all your work to your personal cloud storage or a USB drive before leaving each day.

Any files saved directly on the lab computers may be deleted during the upgrade, and we cannot recover them. Second, some specialized programs used in engineering and design courses will look

slightly different after the update, though they will work the same way. Short guides to the new versions will be posted next to each workstation. If you have any problems, the IT help desk on the ground floor is open from nine to five. Thank you for your cooperation.

11 Comprensión auditiva - Charla académica

Professor: Today I want to talk about one of the most important and least appreciated organisms on the planet: plankton. The word "plankton" comes from a Greek word meaning "drifter," because these tiny organisms drift with the ocean currents, unable to swim against them. They range from microscopic plants to small animals, and though individually they are tiny, collectively they have a planet-shaping influence. Let's start with the plant-like plankton, called phytoplankton. Like plants on land, they perform photosynthesis, using sunlight to make energy and, crucially, releasing oxygen. Here's a fact that surprises most people: phytoplankton in the ocean produce roughly half of all the oxygen in Earth's atmosphere. So with every second breath you take, you have these invisible ocean drifters to thank, not the forests we usually picture. Phytoplankton are also the foundation of nearly the entire ocean food web. Small animals called zooplankton eat the phytoplankton; small fish eat the zooplankton; larger fish eat the small fish; and so on up to whales and the fish we catch for food. Almost all life in the ocean depends, directly or indirectly, on these tiny drifting organisms. If phytoplankton were to decline sharply, the effects would ripple through the entire ocean and beyond. And that brings me to why scientists watch plankton so closely. Because they are so sensitive to conditions like water temperature and chemistry, plankton populations act as an early warning system for the health of the oceans.

Changes in plankton can signal larger environmental shifts, including those linked to climate change. Some studies have raised concerns that warming oceans may be affecting plankton in ways we don't fully understand yet. So these humble drifters are not only vital to life on Earth - they are also one of the key indicators scientists use to take the ocean's pulse. Never underestimate the small.

Comprensión auditiva - Módulo 2 - Elegir una respuesta

12 Elegir una respuesta 1

Why is the elevator out of service?

13 Elegir una respuesta 2

I thought the assignment was due on Friday.

14 Elegir una respuesta 3

Would you like me to save you a seat?

15 Elegir una respuesta 4

Where did you put the laboratory keys?

16 Elegir una respuesta 5

The package was supposed to arrive yesterday.

17 Elegir una respuesta 6

How often does the writing group meet?

18 Elegir una respuesta 7

I cannot decide which statistics course to take.

19 Elegir una respuesta 8

Did the technician manage to repair your laptop?

Comprensión auditiva - Módulo 2 - Audios extensos

20 Participación en un proyecto de investigación

Student: Professor, I saw your notice seeking volunteers for the water-quality project. I am interested, but I have not taken the advanced laboratory course.

Professor: That course is helpful, not required. New volunteers begin by recording field measurements with an experienced student.

Student: Would the work happen every weekend?

Professor: Only two Saturdays this month. After that, most data entry can be done online. Send me your timetable, and I will match you with a field team.

21 Cambio de lugar de una proyección de cine

Announcer: Tonight’s documentary screening has moved from Lecture Room 4 to the larger Riverside Auditorium because more people registered than expected. The film will still begin at seven thirty, but the doors will open at seven. Please show the digital ticket on your phone; printed tickets are also accepted. The discussion with the director will take place immediately after the film in the same auditorium.

22 Por qué las ciudades forman islas de calor

Professor: A heat island occurs when a developed area is warmer than nearby rural land, or when some neighborhoods within a city are hotter than others. Materials such as dark roofs and pavement absorb solar energy during the day and release heat later. Buildings can also reduce airflow, while vehicles and cooling systems add waste heat. The result depends on weather, season, urban design, and the surfaces present; a city is not uniformly warm everywhere. Vegetation can reduce local temperatures in two main ways. A tree shades a surface, so that surface absorbs less solar energy. Plants also move water from the soil and release water vapor through leaves. Evaporation uses energy and produces cooling, a process called evapotranspiration. Green roofs can provide similar effects where ground space is limited. These strategies involve tradeoffs. Trees need water, soil volume, maintenance, and species suited to local conditions. Their cooling is strongest near the shaded area, so planting only in already green neighborhoods will not protect residents elsewhere. Researchers therefore map temperature, land cover, and population vulnerability together. The purpose is not merely to lower one citywide average, but to identify where heat exposure and the capacity to respond are most unequal.

Expresión oral - Escuchar y repetir

23 Repetición 1

The store closes at six.

24 Repetición 2

She fed the cat and opened the curtains.

25 Repetición 3

The players trained hard for the upcoming championship.

26 Repetición 4

The scientist explained that the results would take several weeks to confirm.

27 Repetición 5

When the museum introduced free entry on Sundays, the number of visitors increased dramatically.

28 Repetición 6

The science museum offers free admission to university students who present a valid identification card.

29 Repetición 7

Because tomorrow’s lecture has moved to a larger room, everyone should check the updated location before class begins.

Expresión oral - Entrevista

30 Entrevista 1

To begin, describe a skill you already have that you are good at. What is it, and how did you learn it?

31 Entrevista 2

Some people prefer to take notes by hand, while others prefer to type on a computer. Which do you prefer, and why? Give reasons and an example.

32 Entrevista 3

Your city can spend money on either planting more trees or installing more public benches and seating. Which would you recommend, and why? Explain how it would benefit residents.

33 Entrevista 4

Finally, make a prediction: how might the way people exercise and stay healthy change over the next twenty years? Explain your reasoning.
