IELTS Academic · Set 1

01 Comprensión auditiva - Sección 1: Recorridos en automóvil

Jamie: Good morning, World Tours. How can I help?

Andrea: I would like information about self-drive tours in the USA. My name is Andrea Brown and my address is 24 Ardleigh Road - A-R-D-L-E-I-G-H. My postcode is BH5 2OP and my mobile is 077 8664 3091.

Jamie: Where did you hear about World Tours?

Andrea: I read about the company in the newspaper.

Jamie: For the first California tour, there is time to visit theme parks in Los Angeles. You can then stay in a lodge or at the Yosemite campsite.

Andrea: The theme parks are on my children's list. I would choose the lodge because I do not want to stay in a tent.

Jamie: The second route goes from San Francisco towards Cambria, where you can stop near Hearst Castle, and then continues to Santa Monica and San Diego.

Andrea: I want to see the castle. Shopping does not interest us, but the beaches in San Diego do.

Jamie: Trip One lasts twelve days and covers 2,020 kilometres. The price is £525 per person and includes accommodation, car rental and a flight, but no meals. Trip Two lasts nine days and covers 980 kilometres. It costs £429 per person; flights are not included, but dinner is included at the hotels.

02 Comprensión auditiva - Sección 2: Clubes LP

Sandy: Welcome to LP Clubs. Before the tour, I will describe the facilities, recent improvements and membership options. The indoor swimming pool has been widened to eight lanes, and the fitness suite - or gym - has been refurbished with new exercise equipment. There is no outdoor pool. The tracks and children's sports tuition have not been changed. Every new member completes a personal assessment. The questionnaire asks for details of any health problems. A trainer then explains the safety rules for the fitness equipment and prepares a six-week plan. All members pay a £90 joining fee. Gold membership provides free entry to every LP Club. Premier members receive priority at peak times and passes for guests each month. Members do not need special clothes, but they must bring their photo card to enter.

03 Comprensión auditiva - Sección 3: Concurso global de diseño

Professor: Come in, John. Sit down. I've been looking at your design competition entry - the FreshTrack dishwasher.

John: Yes, I'm quite pleased with how it's come together.

Professor: It's very creative. Now, just to confirm - the competition brief was to develop a new use for current technology, wasn't it?

John: That's right. You could adapt an existing appliance, or design something energy-efficient, but I decided to take existing technology and find a new application for it.

Professor: And why a dishwasher specifically?

John: Well, dishwashers are pretty common in most homes now, but people don't think of them as particularly stylish. I wanted to make them more appealing - give them a design aesthetic they haven't had before.

Professor: Right. Tell me about the 'Rockpool' design. There's a stone involved?

John: Yes - the stone is actually used to switch it on. You place the stone in a special depression on the front, and that activates the machine. It's meant to give it an organic feel.

Professor: Interesting. And the cleaning process uses carbon dioxide?

John: Yes. In the holding chamber, the carbon dioxide changes back from a liquid state into a gas, and it's that gas which does the cleaning - it gets into all the tiny spaces.

Professor: And at the end of the process?

John: The carbon dioxide is collected and stored, ready to be re-used in the next cycle. There's no waste.

Professor: Very good. Now, what stage are you at? Do you need help with anything?

John: I'm struggling a bit with the presentation, actually. I've never done one like this before.

Professor: I'd strongly suggest making a model of the design. A physical model always impresses the judges and helps you explain the technology.

John: That makes sense. My biggest practical problem has been sourcing the materials - I need really high-quality carbon dioxide, and it's been difficult to find a supplier.

Professor: You should apply for a grant. The university has funding available for exactly this kind of project.

John: I didn't know that. That would be a great help.

Professor: One more thing - I'll need to check over the technical information in your written report before you submit. Make sure you send it to me in good time.

John: Of course. Thank you very much.

04 Comprensión auditiva - Sección 4: El oso espíritu

The spirit bear is a white-coated member of the black bear family. Its colouring is caused by an uncommon gene. Local communities believe the bear has a special power and avoid speaking about sightings when strangers visit, which helps protect it. The bear depends on old-growth rainforest. Long tree roots prevent erosion along salmon streams, while the remains of salmon eaten by the bears return nutrients to the forest. The remaining population lives on only a few islands off British Columbia.

Its habitat is threatened by deforestation and roads built by logging companies. Salmon numbers are also falling because fishing is unrestricted. The population is especially vulnerable because its reproduction rate is low. Community organisations, environmental groups and the government are working together. Logging companies are being required to adopt a better logging method. While it is important to maintain the spirit bear's habitat, there also needs to be more emphasis on its expansion.
