Comprensión auditiva - Módulo 1 - Elegir una respuesta

01 Elegir una respuesta 1

Excuse me, where is the science lab?

02 Elegir una respuesta 2

Could you give me a hand carrying these boxes upstairs?

03 Elegir una respuesta 3

How do I register for the workshop?

04 Elegir una respuesta 4

Sorry, I'm running a few minutes late. Could you wait for me?

05 Elegir una respuesta 5

You look really happy today. Did something good happen?

06 Elegir una respuesta 6

Do you know whether the museum tour is full?

07 Elegir una respuesta 7

I cannot find the attachment you mentioned.

08 Elegir una respuesta 8

Would Tuesday morning work for our meeting?

Comprensión auditiva - Módulo 1 - Audios extensos

09 Comprensión auditiva - Conversación

Student: Professor Diaz, could I talk to you about the group project? I'm having some difficulties with my group.

Professor: Of course. What kind of difficulties?

Student: Well, there are four of us, but two members haven't done any work at all. They miss our meetings and don't respond to messages. The other student and I have basically done everything, and it doesn't feel fair that we'll all get the same grade.

Professor: I understand your frustration, and you're right to raise it. Let me ask - have you told the two members directly how you feel, in a clear but calm way?

Student: Not really directly. We've sent group messages, but we haven't confronted them.

Professor: I'd suggest doing that first. Sometimes people don't realize how much they're letting the group down until it's stated plainly. Send a clear message, listing what still needs doing and asking them to take specific tasks by a specific date.

Student: And if they still don't help?

Professor: Then come back to me with a record of your attempts - the messages, the meeting dates. For this project, each group also submits a short peer-evaluation form, where you rate each member's contribution. I take those seriously, and they can affect individual grades. So it won't necessarily be the case that everyone gets the same mark regardless of effort.

Student: That's really reassuring. I'll send that clear message today and keep a record.

10 Comprensión auditiva - Anuncio

Good afternoon. This is an announcement about the student art competition being held by the arts department this term. The theme this year is "Home," and we invite all students, from any department, to submit an original piece of work. It can be a painting, a photograph, a drawing, or a digital design. Entries must be submitted to the arts office by the end of the third week of term. Please attach a short note - no more than fifty words - explaining what your piece means to you.

A panel of staff and student judges will choose the winners, and the best works will be displayed in the main gallery for a month. There are prizes for the top three entries, including art supplies and gallery vouchers. You do not need to be an art student to enter - we especially encourage those who don't usually get the chance to show their creative side. Good luck, and we look forward to seeing your work.

11 Comprensión auditiva - Charla académica

Professor: Today I want to introduce a fascinating idea from psychology called the "spacing effect." It has enormous practical importance for anyone who wants to learn something - which is to say, all of you. The spacing effect describes a simple but powerful finding: we remember information much better when we study it in several short sessions spread out over time, rather than in one long session. Let me put it in concrete terms. Suppose you have six hours to prepare for an exam. You could do all six hours the night before - what students call "cramming." Or you could do one hour a day for six days. Decades of research show, quite consistently, that the spaced approach - the six separate hours - leads to far better long-term retention. Even though the total study time is identical, spreading it out dramatically improves how much you remember weeks or months later. Why does this happen? The leading explanation involves how memories are strengthened through retrieval. Each time you return to material after a gap, your brain has to work a little harder to recall it, and that effortful retrieval strengthens the memory. When you cram, the information is still fresh from a few minutes ago, so recalling it is easy - and easy recall does little to strengthen long-term memory. A little bit of forgetting between sessions, followed by successful retrieval, is exactly what builds durable knowledge. The practical implications are significant, and, frankly, most students ignore them.

Cramming can get you through a test the next morning, because the information is briefly available. But it's remarkably inefficient for genuine, lasting learning. If you're studying a language, a science, or anything you actually want to keep, the research is clear: study a little, often, with gaps in between. Space it out. Your future self will remember far more for the same total effort.

Comprensión auditiva - Módulo 2 - Elegir una respuesta

12 **Elegir una respuesta 1**

Who should I ask about changing my meal plan?

13 **Elegir una respuesta 2**

I heard the outdoor concert was postponed.

14 **Elegir una respuesta 3**

Could you lower the music while I make this call?

15 **Elegir una respuesta 4**

How did your interview go this morning?

16 **Elegir una respuesta 5**

We should bring an umbrella to the picnic.

17 **Elegir una respuesta 6**

I do not think I can finish the report by noon.

18 **Elegir una respuesta 7**

Is this seat taken?

19 **Elegir una respuesta 8**

Where can I recharge my transit card?

Comprensión auditiva - Módulo 2 - Audios extensos

20 Cambio de sesión de un taller

Student: I registered for Saturday's photography workshop, but my work schedule just changed. Is there space in Sunday's session?

Coordinator: Sunday is full, although one person has not confirmed. I can put you first on the waiting list.

Student: Should I cancel Saturday now?

Coordinator: Not yet. Keep that place until I contact you Friday afternoon. If Sunday opens, I will move your registration and send a new confirmation.

21 Cambio en la recogida de la librería

Announcer: Online textbook orders will be collected from the temporary counter in West Hall this week while the bookstore entrance is repaired. Bring your order number and student identification. Orders marked ready before noon can be collected the same day until seven p.m. New orders may take two business days. Returns and exchanges must still be handled at the bookstore's side entrance.

22 Sueño y consolidación de la memoria

Professor: Learning does not end when a study session ends. A new memory is initially fragile, and later biological processes can stabilize and reorganize it. Researchers use the term memory consolidation for these continuing changes. Sleep is one period when recently formed memories may be reactivated without a learner consciously reviewing them. This does not mean that sleep records every experience perfectly. Different kinds of memory involve different brain systems, and sleep can strengthen some information while other details weaken. In experiments, researchers often teach participants a task, allow one group to sleep and another to remain awake for a comparable interval, and then test later performance. The design must control for time of day, fatigue, and additional practice, because any of those factors could otherwise explain a difference. Scientists also study targeted memory reactivation. A sound or odor is associated with learning and then presented quietly during a suitable stage of sleep. Later improvement can suggest that reactivation influenced consolidation. But the cue does not insert an entirely new memory, and results depend on timing and task. The broader point is that sleep is an active biological state that can shape memory, not simply a period in which the brain stops working.

Expresión oral - Escuchar y repetir

23 Repetición 1

The room is very quiet.

24 Repetición 2

They planted flowers along the garden path.

25 Repetición 3

The company offered discounts to its regular customers.

26 Repetición 4

The guide explained that the castle had been built over five hundred years ago.

27 Repetición 5

Although the weather forecast had predicted rain, the afternoon turned out to be bright and sunny.

28 Repetición 6

The campus shuttle now stops beside the residence hall every twenty minutes on weekday mornings.

29 Repetición 7

If you plan to attend the career workshop, please register online before Friday so the organizers can prepare enough materials.

Expresión oral - Entrevista

30 Entrevista 1

To begin, describe a possession that is important to you. What is it, and why does it matter?

31 Entrevista 2

Some people prefer to listen to music while they work, while others prefer silence. Which do you prefer, and why? Give reasons and an example.

32 Entrevista 3

Your town can spend money on either a new public library or a new sports center. Which would you recommend, and why? Explain how it would benefit residents.

33 Entrevista 4

Finally, make a prediction: how might the way people shop for food change over the next twenty years? Explain your reasoning.
