TOEFL iBT 2026 · Set 5

Comprensión auditiva - Módulo 1 - Elegir una respuesta

01 Elegir una respuesta 1

Excuse me, could you tell me which room the meeting is in?

02 Elegir una respuesta 2

Would you like to come to the concert with me tonight?

03 Elegir una respuesta 3

Do you know where I can find the grammar textbook?

04 Elegir una respuesta 4

Maybe we should change our research topic. What do you think?

05 Elegir una respuesta 5

You look exhausted. Did you have any trouble getting here?

06 Elegir una respuesta 6

Is there a quieter place where I can take this call?

07 Elegir una respuesta 7

I am thinking of dropping the evening class.

08 Elegir una respuesta 8

Did the restaurant confirm our reservation?

Comprensión auditiva - Módulo 1 - Audios extensos

09 Comprensión auditiva - Conversación

Male

> Student: Hey, did you sign up for the field trip to the marine biology station yet? Female

> Student: Not yet. I want to go, but it's on the same Saturday as my part-time job. I'm trying to figure out if I can switch shifts. Male

> Student: Oh, that's tricky. It would be worth it though - Professor Alvarez said we'll actually collect water samples and analyze them in the lab afterward. It counts toward the final project. Female

> Student: Wait, it counts toward the project? I didn't realize that. That changes things. How much is it worth? Male

> Student: I think fifteen percent. And if you can't make the trip, you have to write an extra research paper instead, which honestly sounds worse. Female

> Student: Definitely worse. Okay, I'll talk to my manager today about swapping shifts. Do you know how we get there? Male

> Student: There's a bus leaving from the science building at seven a.m. You have to reserve a seat by Thursday, though - space is limited. Female

> Student: Seven a.m.? That's early. But fine. I'll reserve a seat once I sort out work.

10 Comprensión auditiva - Anuncio

Good morning, everyone. This is an announcement for all students using the campus parking lots. Beginning next Monday, Lot C - the large lot behind the engineering building - will be closed for resurfacing for approximately two weeks. During this period, students who normally park in Lot C should use Lot F, near the athletic center, which has been reserved for your use. A free shuttle will run every fifteen minutes between Lot F and the main academic buildings from seven a.m. to seven p.m.

Please allow a few extra minutes for your commute. Parking permits remain valid in Lot F - you do not need a new permit. We apologize for the inconvenience and appreciate your patience as we improve campus facilities. If you have questions, contact the parking office in the student center.

11 Comprensión auditiva - Charla académica

Professor: Today I want to talk about a concept in ecology called a "keystone species." The term comes from architecture - the keystone is the wedge-shaped stone at the top of an arch that holds all the other stones in place. Remove it, and the whole arch collapses. Ecologists borrow this idea to describe a species whose impact on its ecosystem is far greater than you'd expect from its abundance. The classic example comes from a study of the Pacific coast by ecologist Robert Paine in the 1960s. Paine looked at rocky tide pools where a species of starfish preyed on mussels. When he removed the starfish from an area, you might expect the mussels to thrive - and they did. But here's the surprising part: the mussels thrived so much that they crowded out nearly every other species. The diversity of the tide pool collapsed from about fifteen species down to eight. So the starfish, even though it wasn't especially numerous, was keeping the whole community diverse by controlling the mussel population. Now, why does this matter beyond tide pools? Because it changes how we think about conservation. If you're trying to protect an ecosystem, you can't treat every species as equally important. Losing a keystone species can trigger a cascade - a chain reaction of extinctions and imbalances. Sea otters are another example: they eat sea urchins, and sea urchins eat kelp. Remove the otters, the urchins explode in number, and the kelp forests - which shelter countless other species - disappear.

The practical lesson is that effective conservation often means identifying and protecting these disproportionately important species, rather than spreading effort evenly across everything.

Comprensión auditiva - Módulo 2 - Elegir una respuesta

12 Elegir una respuesta 1

When should I return the borrowed projector?

13 Elegir una respuesta 2

I expected the repair to cost much more.

14 Elegir una respuesta 3

Could we move our appointment to the afternoon?

15 Elegir una respuesta 4

Where can I find the course reading list?

16 Elegir una respuesta 5

The train is delayed because of a signal problem.

17 Elegir una respuesta 6

Why did Elena leave the meeting so early?

18 Elegir una respuesta 7

Would you like a printed copy of the schedule?

19 Elegir una respuesta 8

I cannot get this cabinet door to close.

Comprensión auditiva - Módulo 2 - Audios extensos

20 Solicitud de revisión de un prerrequisito

Student: The registration system will not let me choose Environmental Modeling because it says I lack the statistics prerequisite. I took a similar course during my exchange semester.

Adviser: The system cannot recognize external courses automatically. Send me the course description and your transcript.

Student: Registration closes tomorrow. Will the review take too long?

Adviser: I can place a temporary hold on one seat while the department reviews your documents. That hold lasts three business days, so send them today.

21 Acceso al estudio de arte

Announcer: Beginning Monday, students must tap their identification card to enter the art studio after six p.m. The daytime entrance procedure is unchanged. If your card does not work, do not ask another student to let you in; visit the facilities desk before it closes at five. The new system records entry only. You must still sign out specialized tools from the studio supervisor.

22 Evidencias de la expansión del fondo oceánico

Professor: At mid-ocean ridges, tectonic plates move apart and molten material rises, cools, and becomes new oceanic crust. This process is called seafloor spreading. If crust is continually created, we should find systematic evidence on both sides of a ridge-and that is exactly what ocean surveys revealed. First, rocks closest to a ridge crest are generally youngest, while rocks become older with distance. Second, many seafloor rocks contain magnetic minerals. As molten rock cools, those minerals align with Earth's magnetic field and preserve its polarity. Because Earth's field has reversed many times, surveys found alternating bands of normal and reversed polarity. The bands form roughly symmetrical patterns on opposite sides of a ridge, as expected if new rock forms at the center and moves outward. Deep-sea drilling provided another test by recovering rock and sediment at known distances. The measured ages supported the pattern inferred from magnetic stripes. Seafloor spreading does not make Earth continually larger because old oceanic lithosphere is recycled into the mantle at many convergent boundaries. The importance of the evidence lies not in one observation alone, but in the agreement among topography, magnetic patterns, rock ages, earthquakes, and volcanism.

Expresión oral - Escuchar y repetir

23 Repetición 1

The train leaves at nine.

24 Repetición 2

She bought a new umbrella because it was raining.

25 Repetición 3

Although the exam was difficult, most of the students passed it.

26 Repetición 4

The professor who taught the seminar last year has moved to another university.

27 Repetición 5

If the committee approves the proposal, construction of the new library will begin in the spring.

28 Repetición 6

The dining hall added several vegetarian dishes after students shared suggestions in the spring survey.

29 Repetición 7

While the athletic center is being repaired, all fitness classes will take place in the community hall across the street.

Expresión oral - Entrevista

30 Entrevista 1

Let's start with something simple. Can you describe your hometown? What is it like, and what do you enjoy about it?

31 Entrevista 2

Some people prefer studying alone, while others prefer studying in groups. Which do you prefer, and why? Give reasons and an example.

32 Entrevista 3

Imagine your city is going to build either a new park or a new public library with the same budget. Which would you recommend, and why? Explain how it would benefit the community.

33 Entrevista 4

Finally, think about how people will travel in the future. How do you predict transportation might change over the next twenty years? Explain your prediction.
