Comprensión auditiva - Módulo 1 - Elegir una respuesta

01 Elegir una respuesta 1

Excuse me, could you tell me how to get to the Science Library?

02 Elegir una respuesta 2

Could you bring your notes to want to study group tomorrow?

03 Elegir una respuesta 3

Excuse me, who do I talk to about getting a new student ID card?

04 Elegir una respuesta 4

Are you going to the lecture early? Could you save me a seat?

05 Elegir una respuesta 5

You look thrilled today. Did something exciting happen?

06 Elegir una respuesta 6

Do you know why the bookstore line is so long?

07 Elegir una respuesta 7

Could I leave these boxes here until this afternoon?

08 Elegir una respuesta 8

I expected the repair estimate to arrive yesterday.

Comprensión auditiva - Módulo 1 - Audios extensos

09 Comprensión auditiva - Conversación

Student: Hi, I'm graduating this year and I'm feeling pretty lost about what to do next. I don't even know where to begin.

Advisor: That's completely normal, and you're in exactly the right place. Let's start simple. Do you have a general direction in mind - a field or type of work you're drawn to?

Student: I studied environmental science, and I care about sustainability, but I don't know if I want to do research, policy, or work for a company. It all feels overwhelming.

Advisor: Okay, that's actually a great starting point - you have a value you care about, sustainability, and a few possible paths. Here's what I'd suggest. Rather than trying to decide everything now, do some "informational interviews." Reach out to a few people working in research, in policy, and in industry, and just ask them about their day-to-day work.

Student: I hadn't thought of that. Wouldn't people be too busy to talk to a student?

Advisor: You'd be surprised. Most people are happy to spend twenty minutes talking about their career, especially with someone genuinely interested. And it's the best way to learn what a job is really like, beyond the job title. Often students rule out or discover paths they never expected.

Student: That makes sense. It's a lot less pressure than trying to pick the perfect job right away.

Advisor: Exactly. Think of it as gathering information, not making a final decision. Come back after you've spoken to a few people, and we'll talk through what you learned and start narrowing things down.

10 Comprensión auditiva - Anuncio

Good afternoon, students. This is an announcement about the library's new extended hours during the exam period, which begins next Monday. For the three weeks of exams, the main library will stay open twenty-four hours a day, seven days a week, so you can study whenever suits you best. A few things to keep in mind. Overnight, from midnight to six a.m., only the main study floors will be open; the upper floors and the special collections will be closed. Security staff will be on site all night for your safety.

Please remember to bring your student card, as you'll need to scan it to enter the building after ten p.m. Finally, we ask everyone to respect the quiet-study rules, especially at night when people are trying to concentrate. Free hot drinks will be available in the lobby from ten p.m. each night, courtesy of the student union. Good luck with your exams.

11 Comprensión auditiva - Charla académica

Professor: Today we're going to look at one of the most influential inventions you've probably never thought much about: the shipping container. It's just a big metal box, standardized in size, that can be lifted onto ships, trains, and trucks. It sounds unremarkable. But this simple box quietly transformed the global economy, and its story is a wonderful lesson in how sometimes the most powerful innovations aren't flashy technologies but clever standardization. Before the shipping container, loading a cargo ship was slow, expensive, and labor-intensive. Goods arrived at the port in all shapes and sizes - barrels, sacks, crates, loose items - and armies of dockworkers had to load each item individually, packing them into the ship like a giant, awkward puzzle. This could take days, and a large fraction of shipping costs went simply to loading and unloading. The shipping container, popularized in the nineteen fifties by an American businessman named Malcolm McLean, changed all of this. Because every container was the same standard size, goods could be packed into a container at a factory, sealed, and then moved seamlessly from truck to ship to train without ever being unpacked along the way. Cranes could load a container ship in hours rather than days. The cost of shipping goods plummeted - by some estimates, to a small fraction of what it had been. And here's the profound consequence: when shipping becomes cheap, distance matters less. It suddenly became economical to manufacture goods on the other side of the world and ship them to consumers.

The container is a major reason why global supply chains, and the globalized economy we now take for granted, are possible at all. So the next time you see a stack of those metal boxes at a port, remember: that unglamorous standardization did more to shape the modern world than many far more celebrated inventions.

Comprensión auditiva - Módulo 2 - Elegir una respuesta

12 Elegir una respuesta 1

Where should I meet the hiking group?

13 Elegir una respuesta 2

I am unsure whether the conclusion follows from the data.

14 Elegir una respuesta 3

When is the replacement instructor arriving?

15 Elegir una respuesta 4

Would you mind moving your bicycle away from the ramp?

16 Elegir una respuesta 5

How did the audience react to the final scene?

17 Elegir una respuesta 6

The meeting agenda is missing the budget discussion.

18 Elegir una respuesta 7

Why did you choose the earlier laboratory section?

19 Elegir una respuesta 8

Could you tell me how to reach the botanical garden?

Comprensión auditiva - Módulo 2 - Audios extensos

20 Reserva de un asiento accesible para un evento

> Student: I bought a ticket for the lecture, but I recently injured my leg and cannot use the stairs to the balcony. Box

Office

> Staff: We can move you to an accessible seat on the main floor at no extra charge.

> Student: May my friend sit beside me? Box

Office

> Staff: Yes. The companion seat is included in the accessible area, but I need both ticket numbers to change the reservation. Send them through the box office form today, and we will email two replacement tickets.

21 Política de fotografía del museo

> Announcer: Personal photography is permitted in the museum’s permanent galleries beginning today, but flashes, tripods, and selfie sticks remain prohibited. Some borrowed exhibitions do not allow any photography; signs at their entrances identify those restrictions. Images may be used for personal, noncommercial purposes. News or commercial crews must arrange permission in advance through the communications office. Please keep aisles and emergency exits clear while taking photographs.

22 Fijación biológica del nitrógeno

Professor: Nitrogen gas makes up most of Earth’s atmosphere, yet most plants cannot use it directly. Nitrogen is essential in proteins and nucleic acids, so plants need accessible compounds from soil. Biological nitrogen fixation supplies some through microorganisms that convert atmospheric nitrogen gas into ammonia or related forms. An important agricultural example involves rhizobia bacteria and legumes such as beans, peas, and soybeans. The bacteria live in structures on the roots called nodules. The plant supplies energy-rich carbon compounds and a protected environment; the bacteria provide fixed nitrogen that can be incorporated into plant molecules. This is a mutual relationship, but an effective partnership depends on compatible organisms and suitable conditions. Nitrogen fixation is not the entire nitrogen cycle. Other microorganisms transform ammonium into nitrate, decompose organic matter, or return nitrogen gas to the atmosphere. Farmers may use legumes in rotations to add biologically fixed nitrogen, but the amount available to a later crop varies. Some nitrogen remains in harvested material, and soil processes can move nitrogen into water or the atmosphere. Fixation also requires considerable energy from the organism performing it. The useful lesson is that atmospheric abundance does not equal biological availability; microorganisms perform chemical transformations that connect the two.

Expresión oral - Escuchar y repetir

23 Repetición 1

The class is on Monday.

24 Repetición 2

She saved money to buy a new bicycle.

25 Repetición 3

The farmers harvested the crops before the first frost.

26 Repetición 4

The article argued that reading for pleasure improves writing skills over time.

27 Repetición 5

When the new bridge finally opened, the journey between the two towns became much shorter and safer.

28 Repetición 6

The advising office can help graduating students compare job offers and prepare for professional interviews.

29 Repetición 7

Whenever severe weather is expected, the university posts updates on its website and sends emergency alerts to registered phones.

Expresión oral - Entrevista

30 Entrevista 1

To begin, describe a gift you have given someone that they really liked. What was it, and why did you choose it?

31 Entrevista 2

Some people prefer to keep up with the news every day, while others prefer to avoid it. Which are you, and why? Give reasons and an example.

32 Entrevista 3

Your school can spend money on either an art studio or a computer lab. Which would you recommend, and why? Explain how it would benefit students.

33 Entrevista 4

Finally, make a prediction: how might the way people travel between countries change over the next twenty years? Explain your reasoning.
