## Comprensión auditiva - Módulo 1 - Elegir una respuesta

### 01 Elegir una respuesta 1

Excuse me, do you happen to know where the library is?

### 02 Elegir una respuesta 2

Could you help me figure out how to use this coffee machine?

### 03 Elegir una respuesta 3

When will we find out how we did on the exam?

### 04 Elegir una respuesta 4

It's supposed to rain later. Could you bring me an umbrella when you come?

### 05 Elegir una respuesta 5

You look so happy today! Did you get some good news?

### 06 Elegir una respuesta 6

Did the conference organizer confirm your presentation time?

### 07 Elegir una respuesta 7

Why is the side entrance locked already?

### 08 Elegir una respuesta 8

Could you save me a copy of the handout?

## Comprensión auditiva - Módulo 1 - Audios extensos

### 09 Comprensión auditiva - Conversación

Student: Hi, I'm writing a research paper and I'm struggling to tell which sources are reliable. There's so much information online and I don't know what to trust.

Librarian: That's a really important skill, and I'm glad you asked. Let me give you a few questions to ask about any source.

First: who is the author, and what are their qualifications? An article by a professor or a recognized expert carries more weight than an anonymous blog post.

Student: That makes sense. What else?

Librarian: Second, look at where it's published. Is it a peer-reviewed journal, a reputable news organization, or just a random website? Peer-reviewed means other experts have checked it before publication. Third, check the date - for many topics, especially in science and technology, you want recent sources.

Student: What about websites that look professional but I've never heard of?

Librarian: Good question. A professional-looking design doesn't guarantee reliability - anyone can make a slick website. Look instead at whether claims are backed by evidence and whether the site cites its sources. And be cautious of anything that seems designed to make you angry or that only presents one side. Strong emotion is often a sign that a source is trying to persuade rather than inform.

Student: That's really useful. So it's less about how something looks and more about the evidence behind it.

Librarian: Exactly. And remember, you can always cross-check - if several reliable sources agree, you can be more confident. If a claim appears in only one place, be skeptical.

## 10 Comprensión auditiva - Anuncio

Good morning, students. This is an announcement about the upcoming university open day, when we welcome prospective students and their families to campus. It will be held on Saturday the eighteenth, and we're looking for current students to volunteer as guides and helpers. As a volunteer, you'd help with tasks such as giving campus tours, answering questions about student life, and assisting at information desks. It's a great way to give back, meet new people, and it looks excellent on your résumé.

No special training is required - we'll hold a short briefing the day before. In return, volunteers receive a free lunch, a university T-shirt, and a certificate of participation. Shifts are flexible, from two to six hours, so you can help as much or as little as your schedule allows. If you're interested, sign up at the student union office by Wednesday, or email the volunteer coordinator. Thank you, and we hope many of you will take part.

## 11 Comprensión auditiva - Charla académica

Professor: Today I want to discuss a psychological effect that influences your judgments constantly, usually without you noticing: it's called anchoring. Anchoring is the tendency to rely too heavily on the first piece of information we receive - the "anchor" - when making decisions or estimates. Once an anchor is set, everything afterward is judged relative to it. Let me give you a classic experiment. Researchers asked two groups of people to estimate the percentage of African countries in the United Nations. But first, they spun a wheel that landed on a number - which was rigged. One group saw the wheel land on ten; the other saw it land on sixty-five. Then they made their estimates. Now, the number on the wheel was obviously random and had nothing to do with the question. Yet the group that saw ten guessed much lower, on average, than the group that saw sixty-five. The random anchor pulled their estimates toward it. Anchoring shows up everywhere in real life, and businesses use it deliberately. Think about a store that lists a product at an original price of two hundred dollars, crossed out, now on sale for one hundred. That two hundred is an anchor. It makes one hundred feel like a great deal, even if the item was never really worth two hundred. Or consider salary negotiations: whoever names a number first often sets the anchor around which the entire negotiation revolves. What's striking is how hard anchoring is to resist, even when you know about it. Simply being aware that an anchor is arbitrary doesn't fully protect you. But there are strategies.

When you're about to make an estimate or a decision, it helps to deliberately consider the opposite - to ask, "What would make this number too high?" and "What would make it too low?" Generating your own independent estimate before you see someone else's figure can also reduce the effect. The broader lesson is one of intellectual humility: our judgments are far more shaped by irrelevant context than we like to believe.

## Comprensión auditiva - Módulo 2 - Elegir una respuesta

### 12 Elegir una respuesta 1

When can students begin using the new studio?

### 13 Elegir una respuesta 2

I think the first paragraph repeats the introduction.

### 14 Elegir una respuesta 3

Where did the department post the internship results?

### 15 Elegir una respuesta 4

Which seat would you rather have, by the window or on the aisle?

### 16 Elegir una respuesta 5

Why has the field trip departure been delayed?

### 17 Elegir una respuesta 6

The table in our report is missing two values.

### 18 Elegir una respuesta 7

Could you tell me who approved this purchase?

### 19 Elegir una respuesta 8

How was the accommodation near the research station?

## Comprensión auditiva - Módulo 2 - Audios extensos

### 20 Traslado de una presentación a un salón más grande

Student: Forty people registered for our project presentation, but the room I booked has only thirty seats. Events

Coordinator: Room 205 holds fifty and is free at the same time. I can transfer the reservation.

Student: Will the registration page update automatically? Events

Coordinator: The room listing will update, but people already registered will not receive a new notice unless you send one. I will confirm Room 205 now. Then use the attendee list to email the change and replace the room number on your poster.

### 21 Horario de inspección del ascensor

Announcer: The east elevator in the administration building will be unavailable Tuesday from nine a.m. until approximately one p.m. for its annual safety inspection. The west elevator and all stairways will remain open. Anyone needing step-free access to offices on floors two through five should enter through the west lobby. Deliveries larger than the west elevator can carry must be scheduled for another day.

### 22 Por qué brillan las auroras

Professor: The Sun releases charged particles called the solar wind. Earth’s magnetic field deflects much of this flow and forms a magnetosphere. Under suitable conditions, solar-wind energy disturbs that system, and energetic particles follow magnetic field lines toward the upper atmosphere, especially at high latitudes. When those particles collide with atoms and molecules, they transfer energy to them. The energized gases later release light as they return toward lower-energy states. Color depends partly on which gas emits the light, the altitude, and the energy involved. Oxygen commonly contributes green or red emissions, while nitrogen can contribute blue or purple. The process is more specific than saying sunlight simply reflects from polar air. Auroras often form ovals around the magnetic rather than geographic poles. During stronger disturbances, the oval can expand and auroras may appear at lower latitudes. Visibility still depends on cloud cover, darkness, and geometry. Scientists combine solar observations, spacecraft measurements, magnetometers, radar, and cameras. Forecasts describe probabilities because the timing and magnetic orientation of arriving solar material affect how strongly it couples with Earth’s magnetosphere. An aurora is visible evidence of interactions across the Sun-Earth system.

## Expresión oral - Escuchar y repetir

### 23 Repetición 1

The train is on time.

### 24 Repetición 2

She wrapped the present and hid it in the closet.

### 25 Repetición 3

The gardener planted rows of vegetables behind the house.

### 26 Repetición 4

The report concluded that the city needed more affordable housing for young families.

### 27 Repetición 5

Although the first design had several problems, the team improved it until it met all the requirements.

### 28 Repetición 6

The community garden provides tools and seeds for volunteers who help maintain the shared planting areas.

### 29 Repetición 7

Before the semester ends, residents must remove personal belongings from shared storage spaces and return their room keys to the housing office.

## Expresión oral - Entrevista

### 30 Entrevista 1

To begin, describe an achievement you are proud of. What was it, and why does it mean a lot to you?

### 31 Entrevista 2

Some people prefer to have a few close friends, while others prefer to have many friends. Which do you prefer, and why? Give reasons and an example.

### 32 Entrevista 3

Your university can spend money on either improving Wi-Fi across campus or adding more study spaces. Which would you recommend, and why? Explain how it would benefit students.

### 33 Entrevista 4

Finally, make a prediction: how might the way people keep in touch with friends and family change over the next twenty years? Explain your reasoning.
